

## MPC's Bi-Monthly Review

### What is the issue?

\n\n

\n

- MPC has acted predictably in opting to keep interest rates unchanged and in retaining its 'neutral' stance (i.e. rates further could move in either direction).

\n

- But the central bank's policy statements are in contradiction with its actions and therefore MPC has sent out mixed signals.

\n

\n\n

### How does the inflation outlook look?

\n\n

\n

- Price stability remains the primary focus of RBI's "**Monetary Policy Committee**" (MPC) decisions regarding interest rates.

\n

- Currently, trend line retail inflation (based on Consumer Price Index), continues to run above its medium-term target of 4%.

\n

- The MPC has appreciably lowered its projections for CPI (consumer price index) inflation for the fourth quarter of 2017-18, and for the new fiscal year.

\n

- RBI has predicted an inflation slowdown over the next quarter and has cited sharp declines in vegetable prices and moderation in fuel prices as reasons.

\n

- But these inflation projections contradict public expectations.

\n

\n\n

### What are the issues with RBI's projections?

\n\n

\n

- **Inflation** - RBI is not fully convincing in its assertions as a food price reversal and the assumption of a “normal monsoon” aren’t clear.  
\n
- Notably, despite weather predictions of a normal monsoon, MPC itself has flagged risks of temporally or spatially deficient monsoon over food prices.  
\n
- Also, MPC seems to have glossed over the RBI’s March survey of households’ inflation expectations — where prices are seen to be increasing.  
\n
- Feedback from manufacturers also suggests that they expect input and output prices to rise, all which don’t seem to indicate softening inflation pressures.  
\n
- Additionally, while fuel prices are said to ease, MPC seems to have ignored or down played the volatility in the sector.  
\n
- **Growth** - Gross Value Added (GVA) has been replaced by Gross Domestic Product (GDP) as the main measure of economic output, which is surprising.  
\n
- While the policy statement asserts that GDP growth will strengthen in the current fiscal, the earlier forecast of 7.4% has been left unchanged.  
\n
- Hence, the messaging on the economy by the RBI is ambiguous and could have been clearer and more consistent.
