

Need for Institutional reform - Facebook

What is the issue?

\n\n

Individual users' privacy cannot be safeguarded on platforms such as Facebook without institutional reform.

\n\n

What is the recent criticism made against Facebook?

\n\n

\n

- The New York Times recently documented that Facebook had granted its business partners, including Microsoft and Amazon, more intrusive access to user data than it had divulged.

\n

- Some deals permitted access even to private chats, allowing data access without users' permission.

\n

- These Business partners were given more intrusive access to user data than Facebook has ever disclosed.

\n

- In turn, the deals helped Facebook bring in new users, encourage them to use the social network more often, and drive up advertising revenue.

\n

\n\n

What were the larger concerns made earlier?

\n\n

\n

- **Free Basics issue** - Free Basics is an open platform launched by the Facebook that allows free access to certain websites and internet services to those users who cannot afford internet access.

\n

- However, free access is limited to selected partner websites and applications.

\n

- Facebook says that Free Basics was launched with a philanthropic motive to provide free digital access to poorer sections of the society in India.
\n
- However, this deal was opposed on grounds of net neutrality by those who recognised that Facebook would become a gatekeeper to the Internet.
\n
- Facebook was also not clearly stating how it would use the personal data of users on the Free Basics platform.
\n
- Subsequently, the telecom regulator imposed ban on Free Basics in India.
\n
- **WhatsApp acquisition issue** - Facebook changed its privacy policy after acquiring WhatsApp, with effect from September 2016.
\n
- The change allowed sharing a user's metadata between WhatsApp and Facebook, without clearly explaining what was being shared and how it was being used.
\n
- These changes to the terms of service were challenged in a public interest petition in the Delhi High Court.
\n
- However, the HC dismissed this legal challenge, since the fundamental right to privacy was not upheld as a fundamental right at that point in time.
\n

\n\n

- The judgement was appealed against in the Supreme Court and subsequently the SC announced that a Constitution Bench would be constituted in this regard.
\n
- The government submitted that it had constituted a data protection committee headed by B.N. Srikrishna, on the same issue.
\n
- This has created delay in the hearing and the WhatsApp-Facebook case is still pending in the Supreme Court.
\n
- **Cambridge Analytica issue** - Cambridge Analytica, a data analytics company, managed to harvest data from Facebook users.
\n
- This was used to build psychological profiles of more than 50 million individuals.
\n
- A whistle-blower has uncovered it all, highlighting the commercial nexus

between Analytica and US politicians.

\n

- This was particularly aimed at influencing their voting preferences and the outcome of elections.

\n

- A company called Global Science Research (GSR) used a personality App with the permission of Facebook, for supposedly academic research purposes.

\n

- With the help of this, a psychology lecturer at Cambridge University managed to harvest data.

\n

- Data of millions of FB subscribers who used the personality App was sold for presidential campaign.

\n

- FB admitted that though GSR gained access in a legitimate manner, it allegedly violated the rules of agreement.

\n

- A Cambridge Analytica whistle-blower also pointed suspicion to the Indian elections by the Indian National Congress.

\n

- The matter was referred to the Central Bureau of Investigation, which launched a preliminary investigation in September 2018.

\n

- Till date, there is little public information on movement in this investigation.

\n

\n\n

What should be done?

\n\n

\n

- India has the second highest number of Internet users in the world.

\n

- Facebook, despite its unethical conduct, is of enduring value to millions of Indians.

\n

- However, India has little to show as a country in investigatory outcomes, measured regulatory responses or parliamentary processes which safeguard users.

\n

- Lack of institutional capacity to respond to these challenges is the underlying cause for our deficient national response.

\n

- Thus, to properly harness digitisation, India needs to develop and prioritise institutions of governance to protect users.
\n
- This must start immediately with a strong, rights-protecting, comprehensive privacy law.
