

Need for Taxation Reforms

What is the issue?

 $n\n$

India's tax-GDP ratio is still abysmally low and hence more people need to be brought into the tax net to create more fiscal space.

 $n\n$

What is the status of fiscal deficit in India?

 $n\n$

\n

- The government set up a Committee to review the FRBM Act in 2016.
- The Committee recommended that the government should target a fiscal deficit of 3% of the GDP by 2020, which should be reduced further to 2.8% in 2021 and to 2.5% by 2023.
- While the expenditure largely remained on course till November 2018, lower tax receipts would be inflating the fiscal deficit for FY19.
- \bullet The expenditure in the remaining months will further make the expenditure go beyond the Budget estimates. $\mbox{\sc h}$
- India's <u>fiscal deficit</u> was Rs. 5.9 lakh crore, or <u>3.5% of the GDP</u>, in 2017-18.
- The latest available data show that the government has already touched a fiscal deficit of 114.8% of the full-year estimates by the first eight months of this financial year.

 $n\n$

What are the underlying reasons behind the deficit?

 $n\n$

۱n

• The absolute volume of Central tax collection increased by 3% in the last 10 years.

\n

 But the share of direct tax collection in the same period declined by 3%, which has been <u>compensated by the rise in indirect taxes</u>.

 $n\$

\n

• **Indirect Tax** - Within the indirect taxes, excise duty collections increased at the fastest pace by 80%.

\n

- \bullet This is partly because of excise on crude, which saw multiple increases since 2014 when international crude oil prices were falling. \n
- **Direct Tax** The average direct tax collection since FY09 has been around 55% of the total tax collections.

 $n\n$

\n

• The corporate tax collection has been reduced, wherein its share in direct tax fell from 63% in FY09 to 56%in FY18.

۱n

- However, the personal income tax which is considered as a secured source has seen a healthy rise from 35% to 41% during the same period.
- \bullet This is because the number of taxpayers under the direct tax net increased in the last 10 years.

\n

- Tax-GDP ratio The tax-to-GDP ratio has not been impressive for India.
- \bullet Ideally with increase in GDP, the tax collection should also increase. $\mbox{\sc h}$
- If the economy is growing and business is doing well, naturally, profits will be better and therefore taxes should also be higher.

 $n\n$

\n

- In India's case while the overall tax-to-GDP (Centre and State) increased from 17.45% in FY08 to 17.82% in FY17, the GDP and per capita income have doubled during this period.
- \bullet Interestingly, India's rate of growth of tax revenues was not in sync with its GDP growth in the post-reforms period. $\$

 \bullet Thus, India must aim to double its tax-to-GDP ratio to achieve the OECD target of about 34%. $\mbox{\sc h}$

 $n\n$

What should be done?

 $n\n$

\n

- Improving tax-to-GDP ratio India has had a comparatively low tax-to-GDP ratio largely due to <u>low direct tax base</u> and an <u>unorganised sector</u>.
- Direct tax, which primarily involves personal income tax and corporation tax, is more sensitive to GDP growth rate.
- While the direct tax-to-GDP ratio has grown at an average of 5.67% in the last 10 years, real GDP has grown by 7.78% during the same period.
- Thus, the direct tax-to-GDP needs to be increased to create more fiscal space and for that, more people need to be brought into the tax bracket.
- **Increasing tax base** The <u>Kelkar Committee</u> report mentions the 'missing middle' which include professionals (CAs, lawyers, doctors) who do not pay taxes.

\n

- However, government has presumptive taxation measure for them.
- But, unorganised small retailers who are not in tax net have no presumptive taxation.

\n

- Thus, efforts on more presumptive taxation options to businessmen and professionals in Tier-1 and Tier- 2 cities will aid in widening the tax base.
- Also, agricultural income has to be taxed beyond a large threshold limit.
- \bullet India should also promote cashless economy as majority tax evasion occurs in cash transactions. $\ensuremath{\backslash} n$
- \bullet Less cash utility will turn the people towards tax compliance. $\ensuremath{^{\backslash n}}$

 $n\n$

\n

• Revising tax slabs - Many qualified individuals today directly start their

career at the highest 30% tax bracket at Rs. 10 lakhs.

- However, their growth in consequent years may not be substantial. \footnote{he}
- Thus, the government can widen the 20% tax slab beyond Rs. 10 lakhs to give relief to such tax-payers and increase their disposable income.
- Raising tax deduction Section 80C allows individuals and HUFs to claim tax deduction of up to Rs. 1,50,000 from their gross total income for certain investments and payments.
- These tax limits to these investments, which include provident fund, national savings certificate etc., could be increased further to encourage individuals to save more towards their retirement.
- \bullet Additional deposits into these schemes could help the government garner more resources for long-term projects. \n

 $n\n$

Presumptive Taxation

 $n\n$

\n

• As per sections 44AA of the Income-tax Act, 1961, a person engaged in business is required to maintain regular books of account under certain circumstances.

\n

- \bullet To give relief to small taxpayers from this tedious work, the Income-tax Act has framed the presumptive taxation scheme. \n
- A person adopting the presumptive taxation scheme can <u>declare income at a prescribed rate</u> and, in turn, is relieved from tedious job of maintenance of books of account.

\n
