

# **Pollution control measures**

### What is the issue?

 $n\n$ 

\n

• Despite various pollution control measures by the government, air quality is still in the 'very poor' or 'severe category'.

• A multidimensional approach to addressing the menace of deteriorating air quality is vital.

\n

 $n\n$ 

## What are the policy shortfalls?

 $n\n$ 

\n

• **Dirty fuels** - Currently, crude oil, petrol, diesel, jet fuel or aviation turbine fuel (ATF) and natural gas are not included in the GST.

 $n\n$ 

\n

• The sale and supply of these continue to attract earlier taxes like excise duty and VAT.

\n

• So, while industries that use furnace oil-type fuel (dirty and toxic) are given the benefit of input tax credit, those on natural gas (clean) are left out under GST.

\n

• Such policy anomalies dissuade industries from being environmentally conscious.

\n

- **Pet Coke** US has banned the use of this dirtiest fuel due to domestic pollution concerns, and China has stopped importing this fuel.
- $\bullet$  On the other hand, India continues to import pet coke from the US and allows it under the Open General Licence (OGL).  $\mbox{\sc h}$

- While the SC recently banned Pet Coke's use in the Delhi NCR, industries are trying hard to circumvent the orders.
- Automobiles Automobiles are the biggest contributor to pollution, and significantly, diesel emissions are cancer causing.
- Currently, per vehicle emission is being reduced by improving engine efficiency, fuel quality and vehicle systems maintenance.
- However, a lot more vehicles are being added on roads, rendering the above measure meaningless.
- **Besides** these, the lack of regulations on construction procedures, garbage burning, crop burning, etc leads increasingly to deteriorating air quality.

 $n\$ 

## What are the possible solutions?

 $n\n$ 

\n

- <u>Industrial</u>, <u>trade</u>, <u>tax and emission policies</u> should be designed to promote environment friendly practices.
- Efforts to ramp up <u>public transport</u> on massive scale are essential.  $\n$
- Policies for promoting cycling and improving last-mile connectivity can also help in this regard.
- $\bullet$  Farmers should be facilitated with <u>alternative use for crop residue</u> to address the concerns with crop burning. \n
- <u>Waste segregation</u> according to their recyclability and appropriate  $\frac{\text{processing}}{\text{processing}}$  can reduce the risk of garbage fires in mounting garbage dumps.

 $n\n$ 

## **Quick Facts**

 $n\n$ 

#### **Pet Coke**

 $n\n$ 

\n

- Petroleum coke or petcoke is a carbonaceous solid delivered from oil refinery coker units or other cracking processes.
- It is a key input material for cement producers and a highly polluting fuel.
- It is sometimes a source of fine dust, which can get through the air passage and lodge in the lungs, causing serious health problems; though not proven to be carcinogenic(cancer causing).

 $n\n$ 

## **Open General Licence (OGL)**

 $n\n$ 

\n

• An Open General Licence (OGL) is a type of export licence issued by the government to domestic suppliers.

\n

 $\bullet$  These licences are issued with minimal restrictions.  $\ensuremath{\backslash n}$
