

## **Power tender Concerns**

### **What is the issue?**

\n\n

Solar Photovoltaic (PV) projects have witnessed rapidly declining prices in India over the past two years.

\n\n

### **What are the issues with of solar power tenders?**

\n\n

\n

- PPAs signed in the recently concluded solar park tenders that have mutual negotiation clauses and are under scrutiny.

\n

- There is a price difference of almost 23% in a agreement between Kadapa and Bhadla solar plants in Andrapradesh and Rajasthan respectively.

\n

- There is an aggressive trend of bidding to get the tenders at throw away prices.

\n

- These sensitive PPAs (Power Purchase Agreements) and solar projects need to be addressed on a case-by-case basis.

\n

\n\n

### **What is the reason for this fall?**

\n\n

\n

- The winning companies have credited the low rates to the sharp fall in global PV module price.

\n

- Low cost of finance from foreign investments and low risk hedging because of the offtake guarantees provided by NTPC.

\n

- Discoms who buy power from National Thermal Power Corporation or

from solar developers directly are trying to renegotiate their commitments.

\n

- Discoms demands developers with existing power purchase agreements (PPAs) of solar projects to reduce the PPA rate based on auctions.

\n

\n\n

### **What are the impacts of this fall?**

\n\n

\n

- The cost reductions led to the capital costs falling to Rs 11-13 crores/Mw.

\n

- The sustainability of solar sector is questionable.

\n

- Investors are suspicious about Indian solar sector in the near future and hinder the growth by drying up access to finance.

\n

- Developers with these PPAs face the risk of bankruptcy because the electricity generated will not be sold.

\n

\n\n

### **How this issue can be addressed?**

\n\n

\n

- The central and state governments need to take a stand and ask developers to revise their rates.

\n

- For upcoming tenders, developers need to hedge their risk and bid competitively instead of aggressively in order to gain entry into the immensely promising Indian solar market.

\n

- There is a need to arrive at stable prices with sustainable business strategies for the overall solar sector to continue growing in India.

\n

- Retendering can be thought of an option if the price difference is too high.
