MAVEN

 $n\n$

۱n

- The Mars Atmosphere and Volatile Evolution (MAVEN), NASA's spacecraft, has been orbiting mars for the past two years.
- \bullet MAVEN is studying Mars' upper atmosphere, ionosphere and its interactions with the sun and solar wind. \n
- An important aspect of the MAVEN mission is studying how early Mars

lost much of its atmosphere.

\n

- This atmospheric loss may have been partially responsible for Mars' transition from a planet capable of supporting liquid surface water to the dry, desert world we know today.
- Recently, MAVEN has avoided its head-on collision with phobos, the natural satellite of Mars.
- \bullet The other one is Deimos. Phobos is the innermost and larger of the two. $\mbox{\ensuremath{\mbox{\sc h}}}$
