

## Prelim Bits 10-01-2024 | UPSC Daily Current Affairs

### Effects of industries on Dahej

*Industrial pollution has destroyed local fisheries in Dahej near Bharuch, Gujarat.*

### Dahej

- **Location** - Near the ancient port site of ***Barygaza*** (near today's Bharuch) on the ***Gulf of Khambhat***, Gujarat.
- **Economic importance** - It began to be developed as a ***Special Economic Zone (SEZ)*** in 1990.
- It is one of the four ***Petroleum, Chemical and Petrochemicals Investment Regions (PCPIR)*** in the country.

- **Ecological significance** - The freshwater of the Narmada enters the saline waters of the Gulf of Khambhat in Dahej.
- Many types of sea life including shrimp, bumla, salmon, boi, makul are found here.
- It is also the breeding ground of the ***Hilsa*** ('palwa' in Gujarat) fish.

*Gujarat has the longest coastline in the country (1,600 km) and an Exclusive Economic Zone covering an area of 0.214 million square kilometres.*

### **Effects of industries on Dahej**

- Dahej is witnessing the increasing stench of chemicals in the air, turbid sea water and decreasing of fish population.
- The Gujarat Ecology Commission, in its environmental strategy for the year 2014-2019, found Bharuch district to be ***critically polluted*** in terms of industrial waste.

### **Nine-degree Channel**

*The Indian Air Force (IAF) has proposed to set up a forward fighter airbase in Minicoy Islands, to safeguard the sea lanes of communications and to keep the Arabian Sea free from non-state actors in the region.*

- **Location** - In the Indian Ocean between the Laccadive Islands of Kalpeni and Suheli Par, and Maliku Atoll of Minicoy.
- **Features** - Approximately 200 km wide with a depth of 2597 metres.

<b>Channel</b>	<b>Location</b>
8 Degree Channel	Minicoy Island and Maldives
9 Degree Channel	Laccadive Islands and Minicoy Island
10 Degree Channel	Little Andaman and Nicobar

## Lakshadweep

- An archipelago consisting of 36 islands.
- India's smallest and ***uni-district*** Union Territory.

- Almost all the inhabited islands are ***coral atolls***.
- **Capital** - Kavaratti
- The territory falls under the jurisdiction of the ***Kerala High Court***.

## Rock Glaciers

*A study has pointed out that the 100 active permafrost structures identified in Jhelum basin, can cause catastrophic disasters in future.*

- A rock glacier is a *mass of rock, ice, snow, mud, and water* that moves slowly down a mountain under the *influence of gravity*.
- **Formation** - They typically form in ***mountainous regions*** where there is a combination of permafrost, rock debris, and ice.
  - A pre-existing glacier may accumulate debris and rocks as it moves.
  - Over time, if the glacier recedes or thaws, the debris-covered ice can transform into a rock glacier.

*Permafrost - Thick ground layers frozen for at least 2 years*

- **Types** - They are classified as '***active***' or '***relict***' to indicate the status of permafrost within them, identified by the appearance of the rock surfaces.

- **Rock glaciers in Kashmir Himalayas** - The Kashmir Himalayas dotted with these rock glaciers is facing deglaciation (retreat or melting of ice sheets and glaciers).
- The study has pointed that rock glaciers will become a more common mountain landform in the future, as debris concentrations increase in the melting glaciers due to global warming.
- The researchers found that some rock glaciers near glacial lakes in the region such as *Chirsar Lake and Bramsar Lake* particularly increase the risk of [\*glacial lake outburst floods \(GLOFs\)\*](#).

## Halo orbit

[Aditya-L1 spacecraft](#) was successfully placed in halo orbit around the Lagrangian point (L1).

- A halo orbit is a *periodic, 3-dimensional orbit* that occurs near one of the L1, L2, or L3 Lagrange points.
- These points are locations in space where the gravitational pull from two celestial

bodies is equal.

- It is called a halo orbit because the tracked orbit looks like a halo around the moon.

## Air Quality in Indian Cities

*The Centre's ambitious attempt to improve air quality in some of India's most polluted cities suggests that a majority of Indian cities are far from making significant progress.*

- The goal of the [National Clean Air Programme \(NCAP\)](#) is to reduce average particulate matter (PM) concentrations 40% by 2026 (compared to 2017) in 131 cities.

*PM 2.5 is considered the most dangerous grade of pollutant.*

- The aim was to cut pollution 20-40% by 2024 in cities, which was later shifted to 2026.
- **Status** - Delhi has seen average annual PM 2.5 levels decline by 5.9%.
- Navi Mumbai has seen a 46% rise in PM 2.5 levels and Mumbai saw a 38.1% rise and Ujjain, a 46% rise.
- Jaipur and Visakhapatnam saw PM 2.5 increase 13% and 12% rise respectively and Pune 10%.

- **Reduction** - Sharp decline in PM 2.5 from 2019-2023 were Varanasi, with a 72% average reduction in PM 2.5 levels and 69% reduction in PM 10 levels.
- Agra too reported a 53% decline, as did Jodhpur with a 50% decline.
- **PM 10** - With respect to PM 10 levels, apart from Varanasi and Talcher, no other cities have met the 40% reduction target yet.

*PM10 is particulate matter 10 micrometers or less in diameter.*
