Schengen Visa

The European Union (EU) has reportedly decided to punish the United Kingdom (UK) by requiring non-EU citizens to get a transit Schengen visa in order to fly to the UK on transit flights operated by its airlines.

On one-stop flights from India to the UK, passengers can pass through the Gulf and Switzerland (not an EU member) without needing a transit visa.

- A Schengen visa is the most common visa for Europe.
- It is a **short-term visa** that allows its holder to travel freely throughout the Schengen area, which has 26 countries.
- It enables its holder to enter, freely travel within, and leave the Schengen zone from any of the Schengen member countries.
- There are no border controls within the Schengen Zone.
- This is an authorisation granted by a Schengen State for the purpose of
 1. A planned stay in the Schengen States for no more than 90 days in any 180-day period ("short-stay visa") and
 2. Transit through the Schengen States' international transit areas ("airport transit visa").
- **Transit Schengen Visa** is a Type-A visa that allows people to enter a specific airport in the Schengen area for transiting through the area on their way to the final destination outside of the Schengen area.
- If a traveller is passing through a Schengen airport, even if they are not leaving the terminal, they may be required to obtain a Transit Schengen Visa as a third-country national.

InTranSE -II Program

The indigenous Intelligent Transportation Systems (ITS) Solutions for Indian Traffic Scenario was launched under the InTranSE -II Program.

- The InTranSE Phase-II program (2019-2021) is an extension of the InTranSE Phase-I program funded earlier (2009-2012) by the MeitY.
- Under ITS Endeavor for Indian Cities Phase-II initiative of Ministry of Electronics and Information Technology, the following initiatives has been launched
 1. Onboard Driver Assistance & Warning System (ODAWS),
 2. Bus Signal Priority System and

3. Common SMART iot Connectiv (CoSMiC) software.

- **ODAWS** (Indigenous) incorporates vehicle-borne sensors to monitor driver propensity and vehicle surroundings to deliver acoustic and visual alerts for driver assistance.
- It involves the development of sub-modules such as the navigational unit, driver assistance console, and mmWave radar sensor.
 - Using mmWave radar sensors, the positional and dynamic characteristics of surrounding vehicles are probed.
 - Navigational sensor provides a precise geo-spatial orientation of the vehicle as well as trends in driving behaviour.
- **Bus Signal Priority System** is an operational strategy that modifies normal traffic signal operations to better accommodate in-service public buses at signal-controlled intersections.
- Unlike a blind priority that is given for emergency vehicles, here it is a conditional priority, which is given only when there is an overall reduction in delay for all vehicles.
- It will enable to minimize person delay by providing priority to public transport buses, either through Green extension or Red truncation, considering all vehicles approaching a signalized intersection.
- **CoSMiC** is a middleware software providing standard based deployment of IoT adhering to oneM2M based global standard.
- It provides an end-to-end solution for the seamless connection of IoT devices and applications.
- CoSMiC common service layer is used to interface any vendor specific standards and for increasing interoperability with smart city dashboard.
- It provides Interworking Proxy Entity (IPE) APIs for connecting non-oneM2M (NoDN) devices or third-party applications to get connected to the CoSMiC platform.

Mumbai and Hyderabad - Tree City of the World

Mumbai and Hyderabad have been jointly recognised as '2021 Tree City of the World' for their commitment to growing and maintaining urban trees and greenery in building healthy, resilient and happy cities.

While Mumbai has made the list for the first time, Hyderabad has featured on it for the second consecutive year.

- 'Tree Cities of the World' is a programme started by the United Nations' Food and Agriculture Organisation (UN-FAO) and non-profit organisation Arbor Day Foundation.
- It is an international effort to recognise cities and towns committed to ensuring that their urban forests and trees are properly maintained, sustainably managed, and duly celebrated.
- It provides direction, assistance, and worldwide recognition for a community's dedication to its urban forest.
- It provides a framework for a healthy, sustainable urban forestry programme in a town or city.
- For 2021, 138 cities have been recognised under the programme.
- A city is recognised as a 'Tree City' if it meets five core standards to show its commitment towards caring for its trees and forests.

FIVE CORE STANDARDS

STANDARD 1

Establish Responsibility

The city has a written statement by city leaders delegating responsibility for the care of trees within the municipal boundary to a staff member, a city department, or a group of citizens—called a Tree Board.

STANDARD 2

Set the Rules

The city has in place a law or an official policy that governs the management of forests and trees. These rules describe how work must be performed—often citing best practices or industry standards for tree care and worker safety—where and when they apply, and penalties for noncompliance.

STANDARD 3

Know What You Have

The city has an updated inventory or assessment of the local tree resource so that an effective long-term plan for planting, care, and removal of city trees can be established.

STANDARD 4

Allocate the Resources

The city has a dedicated annual budget for the routine implementation of the tree management plan.

STANDARD 5

Celebrate Achievements

The city holds an annual celebration of trees to raise awareness among residents and to acknowledge citizens and staff members who carry out the city tree programme.

- To be recognised as a Tree City, a city must have a written statement delegating responsibility for the care of trees within the municipal boundary to a staff member, a city department, or a group of citizens - a Tree Board.
- The city should have in place a law or an official policy to govern the management of forests and trees.
- The city should have a dedicated annual budget for the implementation of the tree management plan.
- To be recognised as a Tree City, it should organise an annual celebration of trees to raise awareness among people and to acknowledge citizens who carried out the tree programme.

Time Banking

- Time banking is a bartering system for various services, where people exchange services for labor-time based credits as a unit of account, rather than money.
- Labor-time units can be credited to a person's account in the time bank and redeemed for services from other members of the time bank.
- The term "Time Banking" was coined by American lawyer Edgar Cahn, who advocated its use

to supplement government social services.

- It is an intermediate system between a system of monetary indirect exchange and a reciprocal gift economy with some of the pros and cons of each.
- Time banking can be considered a **form of community currency**.

Time poverty

- Time poverty is defined as “not having enough time” to pursue interests beyond unpaid domestic / care work.
- Unpaid labour is not considered ‘real work’ and is often devalued by the men and society, who directly benefit from it.
- The situation leads to emotional strain and combined with the time poverty, the costs often outweigh the benefits.
- Often, women do not find enough time or motivation to participate in activities outside the household.
- Time poverty has a direct bearing on the ability of women to contribute to or participate in the labour market and / or public or political life.
- In 2020, female labour force participation rate declined compared to 2019 in 58 of the 66 countries surveyed by the UN Department of Economics and Social Affairs.

Soil Health Card Scheme

- The Soil Health Card (SHC) is a printed report that a farmer will be handed over for each of his holdings.
- It is used to assess the current status of soil health and, when used over time, to determine changes in soil health that are affected by land management.
- It displays soil health indicators and associated descriptive terms.
- It will contain the status of his soil with respect to **12 parameters**,
 1. N, P, K (Macro-nutrients);
 2. S (Secondary- nutrient);
 3. Zn, Fe, Cu, Mn, Bo (Micro - nutrients); and
 4. pH, EC, OC (Physical parameters).
- Based on this, the SHC will also indicate fertilizer recommendations and soil amendment required for the farm.
- **Uses of SHC** - The card will contain an advisory based on the soil nutrient status of a farmer’s holding.
- It will show recommendations on dosage of different nutrients needed.
- Further, it will advise the farmer on the fertilizers and their quantities he should apply, and also the soil amendments that he should undertake, so as to realize optimal yields.
- **Implementation** - The SHC scheme is promoted by the Department of Agriculture & Co-operation under the Ministry of Agriculture & Farmers' Welfare.
- It is being implemented through the Department of Agriculture of all the State and Union Territory Governments.
- **Cycle** - The SHC will be made available once in a cycle of 3 years, which will indicate the

status of soil health of a farmer's holding for that particular period.

- The SHC given in the next cycle of 2 years will be able to record the changes in the soil health for that subsequent period.
- The sampling is done by the State Government through the staff of their Department of Agriculture or through the staff of an outsourced agency.
