

## **Prelim Bits 17-01-2017**

### **Inclusive Development Index (IDI):**

\n\n

\n

- The index is computed by [World Economic Forum](#) to provide a more complete measure of economic development than GDP growth alone.

\n

- The index has 3 pillars - Growth and Development, Inclusion and Intergenerational Equity and Sustainability.

\n

- IDI scores are based on the scale of 1-7 and it is computed separately for developed and developing countries and is not comparable.

\n

- [Lithuania](#) tops the list of 79 developing economies, Azerbaijan and Hungary at 2<sup>nd</sup> and 3<sup>rd</sup> positions respectively.

\n

- India is placed at 60<sup>th</sup> place, much lower than the neighbouring countries. China (15<sup>th</sup>), Nepal (27<sup>th</sup>), Bangladesh (36<sup>th</sup>) and Pakistan (52<sup>nd</sup>).

\n

- [Norway](#) tops the list in developed economies followed by Luxembourg and Switzerland.

\n

\n\n

\n\n

### **Reclamation of Saline lands in Maharashtra:**

\n\n

\n

- The World Bank will fund the reclamation of saline lands in Vidharba region under the "[Climate Resilient Agriculture](#)" Project.

\n

- National Initiative on Climate Resilient Agriculture was launched by Indian Council of Agricultural Research (ICAR) in 2011 to enhance the resilience of agriculture to climate change.

\n

- Under this project, efforts would be made to revive the natural drainage systems since the topography of the region does not allow the rain water to get drained easily.

\n

- The Majority of the region is in cotton producing districts of Maharashtra and in close proximity to Purna River, which is a tributary of Godavari.

\n

\n\n

### \n**Age of Moon:**

\n\n

\n

- The new research on the minerals brought by the "[Apollo Mission](#)" to the Moon reveals the new age of Moon. The minerals are called as "Zircons" and it is the best mineral in preserving the geological history of moon.

\n

- The research found that the moon formed only about 60 million years after the birth of solar system.

\n

- The moon was formed by a violent, head-on collision between the early Earth and a planetary embryo called "[Theia](#)".

\n

- The Earth's collision with Theia created a liquefied moon, which then solidified and most of the moon's surface was covered with magma right after its formation.
