Malabar Exercise 2018

\n\n

\n

- Malabar is a trilateral naval exercise of the US, Japan and India.

\n

- The Malabar exercise usually features both ashore and at-sea training.

\n

- The maritime exercise has grown in scope and complexity and aims at increasing the level of mutual understanding of the best practices among the three navies.

\n

- This is the first time that the prestigious Malabar exercise is being conducted off Guam, a major US Naval Base in the Western Pacific.

The Hornbill Housing Crisis

\n\n

\n

- Great hornbills are found in the forests of North eastern region of India, Nepal, Bhutan, Mainland South East Asia, Indonesian Islands.

\n

\n\n

\n\n

\n

- Hornbills propagate forests by eating fruits and pooping their seeds far and wide and in turn, they rely on stately old trees to survive.
- During breeding season they need ready-made cavities in soft wood trees made either by a broken branch or the drilling efforts of woodpeckers and Mynas.
- The female squeezes herself into the hollow and uses her droppings to seal the entrance until a only narrow slit remains.
- Humans threaten the bird's habitat by hunting the birds and Illegal logging of their forests, due this there is a habitat crisis for these species.
- Nest adoption programmes to save hornbill habitats in Arunachal Pradesh has been recently launched.

Functional Cure for HIV

\n\n

\n

- Recently 'functional cure' for HIV has been found in Hong Kong, according to the research treatments must be taken daily and do not eliminate the infected cells from the body
- This is found to be a major breakthrough that could see a new antibody be used for both prevention and treatment.
- People infected with HIV can keep the virus under control with antiretroviral drugs, which stop the virus from infecting new cells.

\n

\n\n

HIV Virus

\n\n

\n

- The HIV virus disables the immune system and makes people far more vulnerable to infections and disease.
- The virus can be transmitted through contact with infected blood, semen or vaginal fluids.
- Within a few weeks of HIV infection, flu-like symptoms such as fever, sore throat and fatigue can occur.
- Then the disease is usually asymptomatic until it progresses to AIDS.

\n

\n

- AIDS symptoms include weight loss, fever or night sweats, fatigue and recurrent infections.
