

# Prelim Bits 17-10-2019

### **Livestock Census**

- $\bullet$  The  $20^{\rm th}$  livestock census has been released by the Ministry of Fisheries, Animal Husbandry and Dairying.
- The Livestock Census has been conducted in the country periodically since 1919-20.
- It covers all domesticated animals and its headcounts in both rural and urban areas.
- It has been conducted in participation with State Governments and UT Administrations.
- It considers the following animals/poultry birds possessed by the households, household enterprises/non-household enterprises and institutions,
- Animals Cattle, Buffalo, Mithun, Yak, Sheep, Goat, Pig, Horse, Pony, Mule, Donkey Camel, Dog, Rabbit and Elephant
- Poultry birds Fowl, Duck, Emu, Turkeys, Quail and other poultry birds
- The three key highlights of the 2019 census are,
- i. The total Livestock population is  $\mathbf{535.78}$  million, an increase of  $\mathbf{4.6\%}$  over the previous census 2012,
- ii. Total Bovine population (Cattle, Buffalo, Mithun and Yak) is 302.79 Million, an increase of about 1% over the previous census,
- iii. The total number of cattle is 192.49 million, an increase of 0.8 % over previous Census.
  - The major thrust given to  $20^{th}$  Livestock Census is the collection of data through tablets computers, coordinated by National Informatics Centre.

### **Food Safety Mitra**

- Ministry of Health and Family Welfare launched Food Safety Mitra Scheme on the occasion of World Food Day,2019.
- It is to strengthen food safety administration and scale up the 'Eat Right India' movement.
- The scheme will support small and medium scale food businesses to comply with the food safety laws and facilitate licensing and registration, hygiene ratings and training.
- The Food Safety Mitras would undergo training and certification by FSSAI

and get paid by food businesses for their services.

• It would also create new employment opportunities for youth, particularly with food and nutrition background.

# GOAL

- Going Online as Leaders (GOAL) is a Facebook program launched for underprivileged young tribal women.
- It aimed at inspiring, guiding and encouraging tribal girls from across India to become village-level digital young leaders for their communities.
- It connects tribal women with senior expert mentors in the areas of business, fashion and arts to learn digital and life skills.
- Ministry of Tribal Affairs associated with Facebook have recently launched the  $2^{nd}$  phase of this program.
- In the second phase of the program, will digitally mentor 5000 young women in India's tribal dominated districts.
- It will give provide the tools and guidance they need to succeed, using technology they may otherwise have not had access to.

# **Exoplanets and Dark Matter**

- Nobel Prize in Physics was awarded to Michel Mayor and Didier Queloz of the University of Geneva, for discovering for the first time a planet outside our solar system orbiting a Sun-like star.
- The other half of the prize is to James Peebles, Princeton University, for his contribution to physical cosmology.
- **Exoplanets** It is an extrasolar planet i.e a planet outside our solar system.
- 51 Pegasi b was the first exoplanet to be discovered by Mayor and Queloz in December, 1995.
- $\bullet$  The constellation Pegasus has a star 51 Pegasi which is some 50 light years away from earth.
- According to the NASA exoplanet archive, as of October 10, 2019, there are 4,073 confirmed exoplanets.
- Cosmic Microwave Background (CMB) -40,000 years after the Big Bang, the universe expanded and cooled to a few  $1000^{\circ}$ C.
- This causes it to become transparent, allowing light to pass through it and the observation of the remnants of this ancient glow is known as CMB.
- It was detected first in 1964, winning for its discoverers a Nobel Prize in 1978.
- It consists of light in the microwave range because the expansion of the universe stretched the light so much. Microwave radiation is invisible light.
- By studying the microwave, it could reveal how much energy and matter does the universe contain.

- **Dark Energy** In 1998, it was discovered that the universe is expanding, and that this expansion was gaining speed or accelerating.
- There had to be an "invisible" energy that was driving this.
- Calculations showed that this dark energy did not interact with the observed mass and makes up about 70% of the universe.

## **Microbial Fuel Cells**

- Microbial fuel cells are devices that use bacteria as the catalysts to oxidise organic and inorganic matter and generate current.
- The electrons produced by the bacteria are transferred to the negative terminal and flow to the positive terminal.
- Plants naturally deposit biomatter as they grow, which in turn feeds the natural bacteria present in the soil, creating energy that can be harnessed by fuel cells.
- It is used to power a wide range of vital conservation tools remotely, including sensors, monitoring platforms and camera traps.
- Among conventional power sources, batteries must be replaced while solar panels rely on a source of sunlight.
- On the other hand, plants can survive in the shade, naturally moving into position to maximise the potential of absorbing sunlight.
- Zoological Survey of London has deployed microbial fuel cells in fern to power camera traps and sensors in the wild.
