### Surajkund- Lake of the sun

\n\n

\n

- The place where Surajkund Mela takes place has an ancient connection to Tomar Dynasty.

\n

- Surajkund (the lake of the sun) is the oldest-surviving monument of Delhi.

\n

- Suraj Pal Tomar, in the 10th century, built Surajkund, the huge water reservoir along with a sun temple on the western bank.

\n

- The reservoir was constructed around 686 AD, as said by Syed Ahmed Khan in his book Asar-us-Sanadid.

\n

- The reservoir is built against the backdrop of Aravalli Hills forming a semi-circular shaped embankment.

\n

\n\n

\n\n

\n

- It is designed in the shape of a rising sun with an eastward arc.

\n

\n\n

## Forest owlet

\n\n

\n

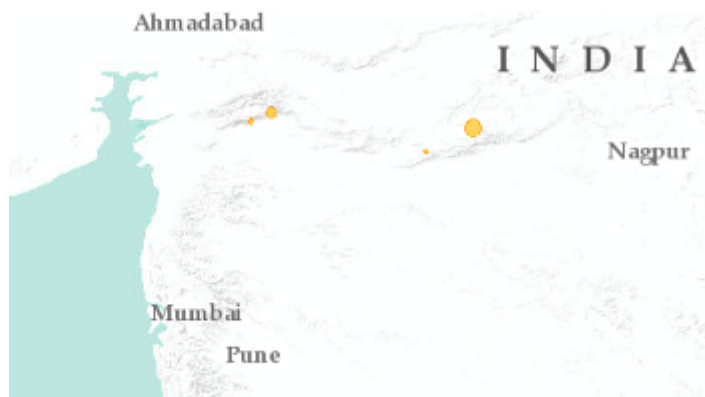

- The century old debate on forest owlet's genetic relationship with spotted owl is resolved.

\n

- The bird belongs to the same genus as spotted owl (Athene).

\n

\n\n

\n\n

\n\n

\n

- The *Heteroglaux blewetti* is endangered under IUCN classification.

\n

\n\n

\n

- Also the bird is endemic to the central Indian forests.

\n

- It is sedentary resident with recent sightings from fairly open dry deciduous forest dominated by teak.

\n

- The species faces a number of threats such as forest loss and degradation as a result of illegal logging and human encroachment, forest fires and minor

irrigation dams.

\n

- The birds is included under CITES Appendix 1.

\n

\n\n

## **Sunderbans Mangrove forest**

\n\n

\n

- Unique mangrove ecosystem that hosts a sizeable tiger population is unable to expand due to developmental pressures and sea level rise.

\n

- The Indian Sunderbans that comprise almost 43% of total mangrove cover.

\n

- ‘State of Art Report on Biodiversity in Indian Sundarbans’ published by World Wide Fund for Nature, India, outlines the threats facing the ecosystem.

\n

- The threats are climate change, habitat degradation due to industrial pollution and human disturbance, fuel-wood collection.

\n

- If the present rate of change prevails, the Sunderbans may disappear due to sea level rise.

\n

- Its natural response to retreat further inland is blocked by geographical features and man-made obstructions.

\n

- The population density of the Indian Sunderbans outside the Tiger Reserve area is 1,000 people per sq km.

\n

- Rehabilitation of former mangrove areas and creation of new mangrove habitations through intensified afforestation program are the only way out.

\n

\n\n

## **Jatan and Darshak**

\n\n

\n

- Centre for Development for Advanced Computing (C-DAC), has developed software named “Jatan” that is set to revolutionize museum experience.

\n

- The latest technology will help online visitors get a 3-Dimensional (3D) view

of hundreds of artifacts displayed at the museums.

\n

- The software will enable virtual tours to museums.

\n

- The group has developed “Darshak”, a mobile-based application, aimed at improving the museum visit experience among the differently-abled.

\n

- It allows real-time museum visitors gather all details about objects or artifacts simply by scanning a QR code placed near the object.

\n

- C-DAC is the premier R&D organization of the Ministry of Electronics and Information Technology (MeitY) for carrying out R&D in IT, Electronics and associated areas.

\n

\n\n

## **Atal Bhoojal Yojana**

\n\n

\n

- Atal Bhoojal Yojana is an ambitious plan aimed at efficient management of available water resources.

\n

- Atal Bhoojal Yojana will focus on demand side management (how to meet requirements by minimum use of water).

\n

- The emphasis of the scheme will be on recharge of ground water sources and efficient use of water by involving people at the local level.

\n

- The half of the fund of 6000 crore will be supported by a world bank loan of 3000 crore and the rest will be funded by central government.

\n

- It would initially be implemented with community participation in Gujarat, Maharashtra, Haryana, Karnataka, Rajasthan, Uttar Pradesh and Madhya Pradesh.

\n

\n\n

## **Enhanced Oil Recovery Program -ONGC**

\n\n

\n

- The program plans to introduce carbon dioxide injection in oil field to recover an extra 20 million barrels of crude oil.

\n

- It is carried out by Oil and Natural Gas Corporation in its Gandhar field.

\n

- The plan is carried out under enhanced oil recovery (EOR) program, whose objective is to improve India's energy security.

\n

- It will be the first large scale CO2 injected project in South Asia.

\n

- Injected gas is miscible with residual oil and reduces its viscosity, making it easier to displace the oil from the rock pores.
