Huntington's disease

\n\n

\n

- Huntington's disease (HD) is a fatal genetic disorder that causes the progressive breakdown of nerve cells in the brain.

\n

- It deteriorates a person's physical and mental abilities during their prime working years and has no cure.

\n

- It is known as the quintessential family disease because every child of a parent with HD has a 50/50 chance of carrying the faulty gene.

\n

- Researchers have recently reported that treatment with a compound called "CTEP" improved memory and also prevents harmful protein build ups in the brain.

\n

\n\n

Tadoba Tiger Reserve

\n\n

\n

- Tadoba Andhari Tiger Reserve is located in Chandrapur district of Maharashtra.

\n

- It is Maharashtra's oldest and largest National Park.

\n

- It is one of India's 47 project tiger reserves existing in India.

\n

- The word 'Tadoba' is derived from the name of God "Tadoba" or "Taru," which is praised by local tribal people of this region.

\n

- "Andhari" is derived from the name of Andhari River that flows in this area.

\n

- It is often referred to as "The Jewel of Vidarbha".

\n

\n\n

CRISPR

\n\n

- \n
 - CRISPR stands for Clustered Regularly Interspaced Short Palindromic Repeats.
 - \n
 - Researchers has recently used genome editing tool “CRISPR - Cas9” to partially treat the genetic deafness in mice.
 - \n
 - A single mistake in “Tmc1 gene” causes loss of inner ear hair cells leading to deafness.
 - \n
 - Scientists believe that the world could one day help treat certain forms of genetic hearing loss in humans.
 - \n
 - CRISPR - Cas9 is a most prominent genome editing technique by targeting specific stretches of genetic code to edit DNA at precise locations.
 - \n
 - The technique allows researchers to permanently modify genes in living cells and organisms and to correct mutations at precise locations in the human genome to treat genetic causes of disease.
 - \n
 - It can be used to target multiple genes simultaneously and can also activate gene expression instead of cutting the DNA.

\n\n

Kaleswaram Project

\n\n

- \n
 - Central government has recently granted environmental clearance to the Kaleswaram Project.
 - \n
 - Pranahitha-Chevella Lift Irrigation Scheme was taken up in 2007 to utilise the water of Pranhita tributary of Godavari River.
 - \n
 - After the formation of Telangana, the project was redesigned into two sections.
 - \n
 - The original component serving the Adilabad area was called the Pranahitha

project.

\n

- The second part is called Kaleswaram Project serving the Karimnagar, Warangal, Nizamabad and Medak districts.

\n

- Water from Godavari River after the confluence by the Pranahita tributary is lifted to provide lift irrigation facility.

\n

- Lift Irrigation project - Pumps are used to lift the water from canals or rivers at lower level to the area at higher level for irrigation purpose.

\n

\n\n

Ganga Gram

\n\n

\n

- Ganga Gram is a project for sanitation based integrated development of all 4470 villages along the River Ganga.

\n

- Ministry of Drinking Water and Sanitation is the nodal agency for implementation of the Ganga Gram Project.

\n

\n\n

Pradhan Mantri Rojgar Protsahan Yojana (PMRPY)

\n\n

\n

- PMRPY Scheme has been designed to incentivise employers for generation of new employment.

\n

- Government of India will be paying the 8.33% EPS contribution of the employer for the new employment.

\n

- This scheme has a dual benefit, where, on the one hand, the employer is incentivised for increasing the employment base of workers in the establishment.

\n

- On the other hand, a large number of workers will find jobs in such establishments.

\n

- A direct benefit is that these workers will have access to social security benefits of the organized sector.
