#### **Lithium-ion battery**

\n\n

∖n

• Scientists have recently developed novel lithium-ion batteries with components that prevent them from catching fire and causing injuries to users.

\n

• Lithium-ion batteries are all about the movement of lithium ions.

\n

• The ions move one way when the battery charges (when it's absorbing power); they move the opposite way when the battery discharges (when it's supplying power).

\n

- Lithium ion batteries are more reliable than older technologies such as nickel-cadmium.
  - ∖n
- Nickel batteries appear to become harder to charge unless they're discharged fully first, it is not the case with lithium ion batteries.  $\n$
- Lithium-ion batteries don't contain cadmium, a toxic, heavy metal.  $\n$
- It has high energy density i.e. it stores more energy per unit of weight when compare to other kind of batteries.  $\n$
- But it still stores a hundred times less energy dense than gasoline (which contains 12,700 Wh/kg by mass or 8760 Wh/L volume).  $\n$
- It is used in every modern cellphone, laptop, tablet, and most other rechargeable gadgets.
   \n

\n\n

#### ICESAT-2

\n\n

\n

• The Ice, Cloud and Land Elevation Satellite-2 (ICESat-2) satellite is

scheduled to be launched by NASA in the month of September.

∖n

• It is a laser-armed satellite which measures changes in the heights of Earth's polar ice.

\n

• It will measure the average annual elevation change of land ice covering Greenland and Antarctica to within the width of a pencil, capturing 60,000 measurements per second.

\n

• Its Advanced Topographic Laser Altimeter System (ATLAS) measures height by timing how long it takes individual light photons to travel from the spacecraft to Earth and back.

\n

- NASA started the ICESAT mission in the year 2003 and continued in 2009 with NASA's Operation IceBridge.  $\n$
- ICESat-2 will also measure the height of ocean and land surfaces, including forests.

∖n

\n\n

#### **Poshan Maah**

\n\n

∖n

- Poshan Maah (National Nutrition Month) is being celebrated in the month of September as part of Jan Andolan under POSHAN Abhiyaan.
   \n
- PM's Overarching Scheme for Holistic Nourishment (POSHAN) Abhiyan strive to reduce the level of stunting, under-nutrition, anemia and low birth weight babies.

\n

- It targets to reduce stunting, undernutrition, anemia and reduce low birth weight by 2%, 2%, 3% and 2% per annum respectively.  $\n$
- Mission 25 by 2022 Although it targets to reduce stunting by 2%, Mission would strive to achieve reduction in Stunting from 38.4% (NFHS-4) to 25% by 2022.

\n

- It may include the following nutrition strategies and interventions  $\n$ 

\n\n

- i. supplementary nutrition,
  - \n
- ii. IYCF(Infant and Young Child Feeding)immunisation,  $\gamma_n$
- iii. food fortification,
  - \n
- iv. adolescent nutrition, n
- v. dietary diversification n
- vi. maternal health
- \n\n
- ∖n
- Behaviour change communication is the key component of POSHAN Abhiyaan for converting it into Jan Andolan (People's movement).  $\n$
- All the States and districts will be covered in a phased manner i.e. 315 districts in 2017-18, 235 districts in 2018-19 and remaining districts in 2019-20.
  \n
- It will be funded 50% by the Government of India and 50% by World Bank or other Multinational Development Banks.

\n\n

## **Genetic Disorders**

\n\n

∖n

- The Centre has prepared a draft policy proposing compulsory genetic screening of all pregnant women to prevent inherited disorders such as thalassemia and sickle cell anaemia.
  - ∖n
- Thalassemia and sickle cell anaemia are variants of Haemoglobinopathies.  $\slash n$
- Hemoglobinopathy is a kind of genetic defect that results in abnormal structure of one of the globin chains of the hemoglobin molecule.  $\n$
- Thalassemia usually results in underproduction of normal globin proteins, often through mutations in regulatory genes.  $\n$
- The abnormality results in improper oxygen transport and destruction of red

blood cells.

\n

- It has wide-ranging effects on the human body like iron overload, bone deformities and in severe cases can cause heart diseases.  $\n$
- The disease has no cure and people living with thal assemia require regular blood transfusions as an effective measure to prolong life.  $\n$

\n\n

### **Comprehensive Economic Cooperation Agreement**

\n\n

\n

- India and Singapore have recently signed the Second Protocol amending the Comprehensive Economic Cooperation Agreement (CECA).  $\n$
- The CECA was the first comprehensive agreement covering trade in goods, services and investments, which India had signed with any of its trading partners.

\n

- CECA involve tariff reduction/elimination in a phased manner on listed or all items except the negative list and tariff rate quota (TRQ) items.  $\n$
- Singapore is the second largest trading partner of India within ASEAN and India is the largest trading partner of Singapore in South Asia.  $\n$
