

## **Prelim Bits 27-12-2017**

### **LiDAR to monitor Air Quality**

\n\n

\n

- Central Pollution Control Board (CPCB) is currently focussing on its surface-level monitoring of air quality of Delhi-NCR.

\n

- However, in “later stages”, it is also planning to take up vertical monitoring by using advanced Light Detection and Ranging (LiDAR) devices.

\n

- LiDAR is a monitoring system for mapping and modelling in -micro-topography, forestry, agriculture, meteorology and environmental pollution-

\n

- LiDAR projects laser beams towards the sky.

\n

- Subsequently, the interplay of light with the objects falling on its path through absorption, reflection, scattering help determine the composition of suspended particulates.

\n

- Elastic Backscatter LiDAR and Raman LiDAR are used in monitoring air pollutants vertically.

\n

- The CPCB and IMD had used the Elastic Backscatter LiDAR during the 2010 Commonwealth Games and the data was utilised in 3D modelling and forecasting during the games.

\n

\n\n

### **Memristors & AI**

\n\n

\n

- Artificial neural networks (ANNs) are computing systems that can learn and progressively improve performance on tasks by considering examples.

\n

\n\n

\n

- Researchers have recently developed a new type of neural network chip that can dramatically improve the efficiency of teaching machines to think like humans.
- It improves a typical neural network's capacity and reduces the required training time.
- They have been created in the past with larger optical components.
- Now the researchers have created their system using memristors.
- Memristors are a special type of resistive device that can both perform logic and store data.
- This contrasts with typical computer systems, where processors perform logic separate from memory modules.
- Hence they require less space and can be integrated more easily into silicon-based electronics.

\n\n

## **BND-4201**

\n\n

- Bharatiya Niradeshak Dravya (BND-4201) is India's first home-grown high purity gold reference standard recently launched.

\n\n

- It will be the reference material for gold of '9999' fineness i.e gold that is 99.99% pure.
- It will be beneficial to the consumers and public at large to ensure purity of gold.
- Once the BND's of other purity gold are made available in the market, jewellers will move towards more instrumental methods.
- The conventional fire assay methods for testing are not only time consuming but also not environment friendly as poisonous gases are released.

- This will also be useful for Collection and Purity Testing Centres to certify the purity of gold deposits under the gold monetisation scheme.

\n

\n\n

## **CAMPA Rules**

\n\n

\n

- Compensatory and Afforestation Fund (CAF) Bill envisaged the creation of a permanent Compensatory Afforestation Fund Management and Planning Authority (CAMPA).

\n

- The Bill establishes the National Compensatory Afforestation Fund and a State Compensatory Afforestation Fund under each State.

\n

- The Bill allows the States to access nearly Rs.42,000 crore, mostly collected from industrial projects as penalties, from CAMPA and channel it into afforestation projects.

\n

- More than a year after the Union government brought in the law, it is yet to frame rules to get the money disbursed.

\n

- While States are getting money, it continues to be under an “ad hoc” mechanism whereby the Centre disburses it on a needs-basis.

\n

- Also a year after the law came into being, the disbursement this year has dropped to a three-year low.

\n

\n\n

## **\$318 Million Loan Agreement**

\n\n

\n

- The Government of India, the Government of Tamil Nadu and the World Bank today signed a \$318 million loan agreement for the **Tamil Nadu Irrigated Agriculture Modernization Project**.

\n

- The project is to promote climate resilient agriculture technologies, improve water management practices, and increase market opportunities for small and marginal farmers.

\n

- More than 160,000 ha of currently partially irrigated lands will come into full irrigation under this project.  
\n
- The project will rehabilitate and modernize about 4,800 irrigation tanks and 477 check dams, spread across 66 sub-basins, in delivering bulk water to irrigation systems.  
\n
- Paddy is the dominant crop occupying 34% of total cropped areas, whereas fruits and vegetables are grown on 11% and pulses and oilseeds on 14% of total cropped areas.  
\n
- By helping farmers' access modern technologies, linking them to markets, and providing postharvest management support, the project will enable farmers to shift from a mono crop paddy system to mixed cropping.  
\n
- The project will support smallholder producers adopt new conservation technologies such as the System of Rice Intensification (SRI) and Sustainable Sugar Initiative (SSI).  
\n
- They reduce average water usage by 35% and increase yields by 22% per ha.  
\n
- The loan has a 5-year grace period, and a maturity of 19 years.  
\n
