OBSERVATORY UNDERGROUND

WHY NEUTRINOS

Neutrinos are subatomic particles, abundant in the universe but hard to detect. Studying these particles is expected to help answer some basic questions about the universe.

330/cu. cm

Density of neutrinos in universe.

100 trillion/second

Rate at which neutrinos pass through human body.

INO PROJECT

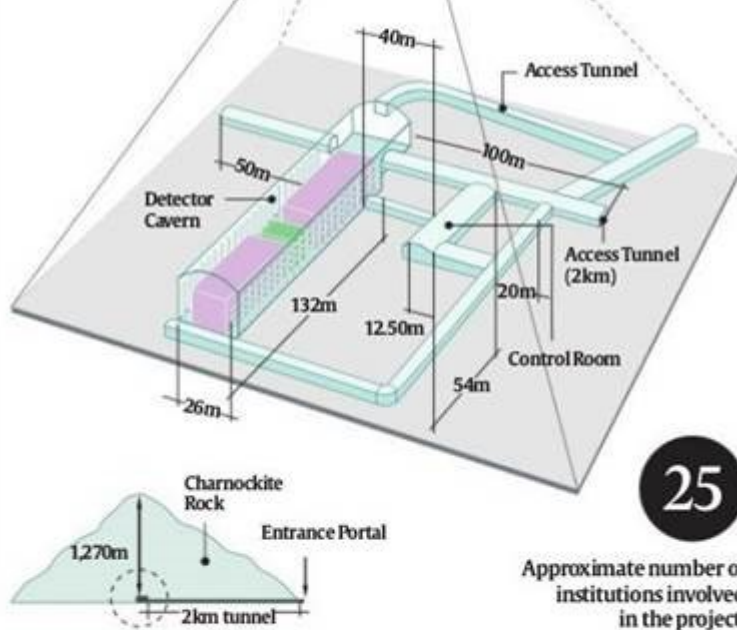

Nearly 1.5 km below the Earth's surface, an iron calorimeter (ICAL) detector will be placed. The project will seek to establish a mass hierarchy among known types of neutrinos.

50,000 tonnes

Magnets will make up the iron calorimeter detector.

Rs 1,585 cr

Project estimated cost, as of 2015.

Approximate number of institutions involved in the project.

PROJECTS ELSEWHERE
