Kyasanur Forest Disease (KFD)

\n\n

\n

- Kyasanur Forest disease (KFD) or Monkey Fever is a **tick-borne viral hemorrhagic fever endemic to South Asia**.
- The disease is caused by a virus belonging to the family **Flaviviridae**, which also includes yellow fever and dengue fever.
- The virus has been detected in monkeys in parts of **Bandipur National Park**, Karnataka.
- Goa's Directorate of Health Services has intensified their fever surveillance and precautionary measures for the Kyasanur Forest Disease (KFD), after a woman died of this illness.
- The symptoms of the disease include a high fever with frontal headaches, followed by haemorrhagic symptoms, such as bleeding from the nasal cavity, throat, and gums, as well as gastrointestinal bleeding.
