

Privatizing Commercial Coal Mining

What is the issue?

\n\n

\n

- The union government is considering opening up the commercial mining of coal to the private sector - a move that was long overdue.

\n

- This is expected to ramp up investments and help in meeting the surging local demand for coal.

\n

\n\n

How has the coal sector in India evolved over the years?

\n\n

\n

- India's coal industry was predominantly driven by the private sector in the early years after Independence.

\n

- Indira Gandhi government in 1973 transferred all coal holdings to public sector company "Coal India Ltd" through the Coal Mines (Nationalisation) Act.

\n

- The key reason cited for nationalising was that it was essential to meet the growing need for coal to feed the critical power sector.

\n

- Currently, the sector is a virtual monopoly of the public sector behemoth "Coal India Ltd", which accounts for over 80% of indigenous coal production.

\n

- Another public sector firm, "Singareni Collieries Company" account for the majority of the rest.

\n

- Private players have been allocated some "captive coal mines" to cater to fixed specific end-use domains such as the steel sector.

\n

- Commercial coal mining is currently not open to private players at present.

\n

\n\n

How is the current demand scenario?

\n\n

- \n
 - Despite an aggressive push for renewable and nuclear sources, India has a high dependence on coal for power generation.
- \n
 - Currently, 70% of electricity generation is through coal-fired thermal plants.
- \n
 - Despite its rich coal-bearing belts and increased output, and Coal India Ltd is unable to keep pace with demand from new power plants.
- \n
 - Consequently, there has been a significant surge in coal imports lately.

\n\n

What are the other recent developments in the coal sector?

\n\n

- \n
 - The present government has moved swiftly in this domain to fix the inherited irregularities in coal block allocation (coal scam).
- \n
 - In 2014, Supreme Court cancelled the allocation of 204 coal mines to various parties as irregularities were discovered by the CAG.
- \n
 - An ordinance was brought in quickly and a transparent auction process was evolved for the affected mines.
- \n
 - The intention was to ensure that there are no supply shocks for power producers on account of abrupt disruptions in mining operations.

\n\n

What are the moves towards privatising coal?

\n\n

- \n
 - **The initiatives** - Enabling provisions for commercial mining and sale of coal were already included in the Coal Mines (Special Provisions) Act of 2015.
- \n
 - Cabinet Committee on Economic Affairs (CCEA) has now allowed their

implementation by approving the methodology for auctioning rights.

\n

- The government holds that the move will boost energy security, make coal affordable and enable more job creation.
- It remains to be seen if the government will open up valuable coal blocks for bidding or merely the lesser profitable ones of Coal India.
- **The concerns** - For genuinely generating private interests, a considerable chunk of the valuable mines needs to be opened up.
- It is also important to ensure the integrity of the auction process and the checks needs to be placed to dissuade unviable bids.
- These are highly critical to ensure that a reliable and continuous coal supply is ensured for the power sector.
- Also, India has for long had a poor record on miner's safety, and these major reform initiatives should also have provisions concerning these.
