

Problem with Employment data

What is the issue?

 $n\n$

The nature and extent of the employment in India are barely understood in the absence of information on unorganised sector workers.

 $n\n$

What is the background?

 $n\n$

\n

- India do not have a reliable official database on certain aspects of the labour market and industrial relations such as employment, strikes and lockouts.
- The current scenario of employment in India has transformed from a long term employment to $\underline{\text{fixed short term engagement}}$ in the form of contracts.
- This has created a need for an official employment database to capture these significant changes.
- Several official agencies collect data on employment/unemployment with differing definitions and classifications of workers and with different frequencies (decadal to annual/quarterly).
- Private sector data sets and proxy data sets (payroll data) have also emerged to capture these employment pattern changes.

 $n\n$

What are the problems with official calculations?

 $n\$

\n

• **Manufacturing sector** - The <u>Annual Survey of Industries</u> (ASI) collects employment data annually on workers/employees from the establishments covered under the Collection of Statistics (COS) Act, 2008.

\n

- The employment data relates to directly employed workers, contract workers, supervisory and managerial staff and other employees.
- Directly employed workers comprise both <u>permanent workers and non-permanent workers</u> including non-statutory apprentices/trainees and fixed-term employees (FTE).

۱'n

• There is a possibility that some of the directly employed workers are being indulged in per hour work or a part time work, with wages even less than the contract workers.

۱n

- \bullet But there is no further classification on the nature of employment i.e., based on hours part time or full time. \n
- All directly employed workers are being equated as 'regular/permanent workers' and only the contract workers are treated as the flexible category.
- This shows that there is a gross <u>underestimation of flexible workers</u> reported in the official data.

۱n

- Also, the ASI primarily covers the registered manufacturing sector, leaving out the unorganised or unregistered or informal sector enterprises.
- Service sector Data related to this sector comes under the State-level Shops and Establishments Acts.
- \bullet A reliable data set on the service sector has not been established, mainly because of lack of data submissions from the state labour departments(SLD). \n
- Thus, the Labour Bureau should compile and provide sector-wise data of the SLDs under its control.

\n

 $n\n$

What should be done?

 $n\n$

\n

- India's labour market governance is at peril as there is a serious information deficit on unorganised sector workers in the country.
- It is imperative that the government takes measures to design afresh a statistical system reflective of dynamics of changes in the labour market.
