

RBI's Monetary Policy

Why in news?

\n\n

The Reserve Bank of India (RBI) is about to announce its monetary policy.

\n\n

What is a Monetary Policy?

\n\n

\n

- Monetary policy is the process by which the RBI controls the supply of money, often targeting an inflation rate or interest rate to ensure price stability.

\n

- RBI reviews its monetary policy every two months.

\n

- The RBI implements the monetary policy through open market operations, bank rate policy, CRR, SLR, reserve system, credit control policy, moral persuasion etc.

\n

- Using any of these instruments will lead to changes in the interest rate, or the money supply in the economy.

\n

- Increasing money supply and reducing interest rates indicate an expansionary monetary policy. The reverse of this is a contractionary monetary policy.

\n

\n\n

What are the key issues to be addressed?

\n\n

NPA movement

Year	Gross NPA (in ₹ lakh crore)	GNPA % to credit	New NPA	Recovery & upgrades (in ₹ lakh crore)	Write-off	Net NPA %
2022-23		3.90				1
2021-22	7.43	4.30	2.83	1.95	1.79	1.70
2020-21	8.35	7.30	4	1.18	2.08	2.40
2019-20	8.99	8.20	3.78	1.57	2.37	2.80
2018-19	9.36	9.10	3.14	1.79	2.36	3.70
2017-18	10.3	11.20	6.04	1.28	1.62	6.00
2016-17	7.9	9.30	4.15	1.2	1.08	5.30

\n\n

\n\n

\n\n

\n\n

\n

- **Rate cut** - The RBI has consistently kept the interest rates low in the last two monetary policy announcements.

\n

- The market expects the repo rate to be reduced by 25 basis points (bps) to 6%. One bps is a hundredth of a percentage point.

\n

- But there is also an another argument that due to demonetisation the interest rates are already low and therefore repo rate should remain unchanged to boost savings.

\n

- Therefore RBI's any move regarding this should be accompanied by stating the proper reasoning behind it.

\n

- **Inflation** - Retail inflation decelerated to a two-year low of 3.41% in

December as vegetable prices continued to fall.

\n

- RBI is aiming to keep retail inflation under 5% in the fourth quarter and 4% within a band of 2 percentage points on either side in the medium term.

\n

- The RBI's assessment of the inflation situation would be crucial to understand all future rate movements.

\n

- **Demonetisation impact** - This is the second RBI monetary policy announcement since demonetisation.

\n

- In the last monetary policy announcement, RBI did not clarify the impact of demonetisation on growth in India.

\n

- It is crucial to find out the real consequences of removing 86% of currency notes by value from circulation. Data points about the total deposits acquired by banks during the 50-day period and the number of new currency notes pushed back into the banking system should be given out.

\n

- **MPC decisions** - All six members of the Monetary Policy Committee (MPC) have consistently taken an unanimous monetary policy decision.

\n

- Therefore it would be important to see if all six votes are in favour of a rate cut or a pause.

\n

- **Commentary on sectoral issues** - The banking regulator has not made any major announcements around banking sector issues such as capital and asset quality since the demonetisation announcement.

\n

- The former RBI governor Raghuram Rajan chose March 2017 as deadline for banking sector's bad loan trouble.

\n

- Therefore a decision is awaited on this issue.
