

## **RBI's New Framework for Resolving NPAs - II**

Click [here](#) for part I of the issue

\n\n

### **What is the need for new reform?**

\n\n

\n

- Following the RBI's first asset quality review (AQR) in 2016, state-owned banks had reported sharp slippages.

\n

- In the same year a whopping Rs.2.7 lakh-odd crore of bad loans were added to the system.

\n

- Nearly Rs.1.7 lakh crore NPAs were added in just the first nine months of the current fiscal.

\n

- A significant portion of NPAs had been swept under by banks under the appearance of various restructuring schemes.

\n

- For this reason RBI has withdrawn the CDR, JLF, SDR, S4A or 5/25, and placed them under the new framework.

\n

\n\n

### **How will the new framework work?**

\n\n

\n

- Banks will now have to begin the resolution process on an account as soon as it is classified as a Separately Managed Account (SMA-0), where payments are overdue by 1-30 days by any one bank within a consortium.

\n

- This will tighten the norms for reporting default to the central repository.

\n

- At least 20 per cent of the outstanding principal and capitalised interest will have to be repaid by the defaulters for the account to be upgraded back to 'standard' from default.

- \n
- In respect of accounts with aggregate exposure of Rs.2,000 crore and above, lenders will have to draw up a resolution plan within 180 days from March 1, 2018 (or default date as the case may be).
- \n
- The resolution plans proposed by the banks need the approval of credit rating agencies and will have to deliver results.
- \n
- Failing which banks will have to refer the case for insolvency under the IBC.
- \n

\n\n

### **What are few practical constrains with RBI's framework?**

\n\n

- \n
- Banks will have to make higher provisioning 15% when an asset's restructured and 50 per cent if referred to the IBC.
- \n
- With around Rs.2 lakh crore of loans likely to come under the revised framework, capital issues could annoy PSBs yet again.
- \n
- The requirement of all lenders agreeing to the resolution plan could also prove challenging.
- \n
- Whether the existing infrastructure under the IBC set up will be able to deal with the expected deluge of insolvency filings is another issue.
- \n
- Above all, the new framework still deals with the stock of the NPA problem and not the flow.
- \n

### **Quick Fact**

\n\n

**The following schemes of RBI has been abolished**

\n\n

## **CDR**

\n\n

\n

- Corporate debt restructuring is the reorganization of a company's outstanding obligations.

\n

- It is often achieved by reducing the burden of the debts on the company by decreasing the rates paid and increasing the time the company has to pay the obligation back.

\n

\n\n

## **SDR**

\n\n

\n

- Strategic Debt Restructuring was introduced by RBI to help banks recover their loans by taking control of the distressed listed companies.

\n

- The Scheme has been enacted with a view to revive stressed companies and provide lending institutions with a way to initiate change of management in companies which fail to achieve the milestones under Corporate Debt Restructuring ("CDR").

\n

\n\n

## **S4A**

\n\n

\n

- Scheme for Sustainable Structuring of Stressed Assets was introduced by RBI as an optional framework.

\n

- The S4A envisages determination of the sustainable debt level for a stressed borrower, and bifurcation of the outstanding debt into sustainable debt and equity/quasi-equity instruments.

\n

- This is expected to provide upside to the lenders when the borrower turns around.

\n

\n\n

## **5/25 rule**

\n\n

\n

- In Infra projects the project's economic life is 20-25 years and its cash flows are beyond that, but the repayment was restricted to 10 or 15 years.

\n

- The 5:25 scheme allows banks to extend long-term loans of 20-25 years to match the cash flow of projects, while refinancing them every 5 or 7 years.

\n

- This expected to match the cash flows according to the repayment schedule and making long-term infrastructure projects viable.
