

Reforming Healthcare Systems

What is the issue?

\n\n

\n

- The West Bengal Clinical Establishment Regulatory Commission has fined Apollo hospital chain Rs 30 lakh over the death of a 4-month-old.

\n

- The commission was set up in response to widespread public protests over **mistreatment and overcharging**.

\n

\n\n

What did the WHO recommend?

\n\n

\n

- WHO representative in India had sought **regulation of the private healthcare sector**.

\n

- It also asked the government to consider tax based financing of universal health coverage.

\n

- This, along with a degree of regulation of private delivery can achieve something meaningful.

\n

\n\n

What is the present state of healthcare?

\n\n

\n

- There is a **massive shortfall in state delivery** of affordable healthcare.

\n

- Therefore, people are forced to turn to private deliverers and becoming prone to overcharge and underserve.

\n

- Over 80% of what Indians spend on healthcare is out of pocket.

\n

- In 2016-17 state and central governments spent **1.4% of GDP** on health compared to a **global average of 5.99%**.

\n

- The far greater challenge is to improve the quality of management of the public health service.

\n

- So that the enhanced state funding translates into at least somewhat acceptable delivery.

\n

\n\n

What are the problems?

\n\n

\n

- Lack of functioning primary health centres across the country which have doctors, paramedics and a stock of essential medicines to distribute.

\n

- Over concentration of new super speciality hospitals.

\n

- A lot of investment has been made in equipment but there is often an issue with staff being posted to run them.

\n

- The **national doctor patient ratio** is poor compared to international benchmarks, but the ratio for rural areas is even worse.

\n

- This is because doctors are reluctant to move out of urban areas.

\n

\n\n

What might be an effective solution?

\n\n

\n

- Make district hospitals into teaching hospitals where a **preference is given to local students**.

\n

- This increases the chances of them working in areas where they come from.

\n

- Rural areas also face a severe shortage of paramedics.

\n

- Have more nursing colleges and train the students to become '**nurse practitioners**', who can deliver basic diagnosis and prescribe essential

treatment.

\n

- Two-year courses for nurse practitioners in critical care have been started.
