

## Reforming the Agrarian Business

### Why in news?

\n\n

\n

- There are raising agrarian protests and agitation across the nation, government should find solution of such issues rather than supressing it.

\n

- Government schemes on agriculture are that packet of nutrients to the farmers.

\n

\n\n

### What is the issue?

\n\n

\n

- Policies should focus on extension services, land leasing practices and the management of farmer producer companies.

\n

- Suddenly, farmers in India have a happening life.

\n

- A digital wallet, Smartphone apps, crop insurance, soil health cards, e-markets and best of all, an American dream that their incomes will double by 2022.

\n

- Farmers hear about Aadhaar having the potential to change their lives.

\n

- The news about 'One Nation One Market' is promising.

\n

- Agricultural commodity exchange 'NCDEX' has been making a lot of news.

\n

- The vibe in the rural is that 'something big is happening, but we don't really know what it means to us'.

\n

\n\n

### What are reforms in need among agrarian community?

\n\n

## **Strengthening the agricultural extension system:**

\n\n

- \n
- Leveraging the technology and adapting it to local conditions, government extension departments should upgrade themselves.
- \n
- A farmer should be able to raise an information or trouble shooting request through his/her mobile by simply voice recording or taking a picture.
- \n
- It should be centrally monitored but locally delivered through the field agronomist.
- \n
- A suggestion without any accountability will not have much relevance. Also, incentives for the officer should be based on outcomes.
- \n
- Only then can tools such as Plantix implemented in Andhra Pradesh can be leveraged for this purpose.
- \n

\n\n

## **Regulatory reforms in land:**

\n\n

- \n
- Land ownership is still a highly debatable issue in rural India.
- \n
- The panel set up under NITI Aayog suggested reforms in land leasing policies, ramping up of land records and titles.
- \n
- This will create better access to credit and help farmers realise the value of asset when required.
- \n
- On one hand, we read that small scale farming has challenges due to diseconomies of scale.
- \n
- On the other hand, land is being fragmented more and more with one generation handing it over to the next.
- \n
- Without progressive regulations on land leasing or aggregation, farming will continue to be increasingly unviable in may parts of India.
- \n

\n\n

## **Creating hybrid governance structures of farmer collectives:**

\n\n

- \n
  - Despite forming more than 3,000 farmer producer companies (FPCs) to solve the problem of distribution and diseconomies of scale.
  - \n
    - A recent study from the Institute of Livelihoods Research and Training found that many of these FPCs are missing both competent, business-minded leadership and transparency.
    - \n
      - Generally, in a company form of organisation, ownership and management are two separate boxes.
      - \n
        - But in farmer producer companies, farmers own and manage the set up.
        - \n
          - We know the limitations farmers have in terms of education and business exposure.
          - \n
            - This needs to change, it requires professional expertise and business acumen.

\n\n

## **What is the way forward?**

\n\n

- \n
  - Today, 100 per cent of ownership and 100 per cent of management of FPCs is with farmers.
  - \n
    - If professionals and business-minded people are roped in, things can look better.
    - \n
      - With 20 per cent ownership in professional hands, things can change.
      - \n
        - There will be business interest for professionals to turn the business profitable and farmer groups can enjoy 80 per cent of the profits, too.
        - \n
          - However, regulation should provide safeguards against any exploitation by one party of the other.
