

## Reimagining our Higher Education Landscape

### What is the issue?

\n\n

\n

- Poor quality, increasing privatisation and politicisation have been chronic problems that our education system faces.

\n

- There currently seems to be some positive churn, but much remains to be done to usher in significant progress.

\n

\n\n

### What is the current state of affairs?

\n\n

\n

- Since independence, it has been a challenge to build a quality higher education infrastructure with limited funds.

\n

- While excellence is possible, as the IITs and IIMs show, it is limited to a tiny segment of a system that enrolls 35 million students.

\n

- Internationalisation is central to academic success in the 21st century — and India has been notably weak.

\n

- India has shown academic innovations over the years, but on a limited scale and never in the comprehensive universities.

\n

- In recent times, things seem to be changing, at least at the top levels of our higher education eco-system.

\n

\n\n

### What are the new changes?

\n\n

\n

- **NIRF** - “National Institutional Ranking Framework”, implemented in 2016, is India’s first government-supported ranking of colleges and universities.

\n

- It demands the participating institutions to submit data on critical areas and also makes a distinction between universities and colleges.

\n

- NIRF may in the future guide government financial support for higher education and also aid in education related policy making.

\n

\n\n

\n

- **IoE project** - Institutions of Eminence (IoE) project seeks to identify 10 public and 10 private institutions as IoE, to enable their further development.

\n

- It has been proposed that the identified IoE will be provided enhanced autonomy and financial support (funds only for public institutes).

\n

- **Graded Autonomy programme (GAP)** - This is an initiative that plans to give participating institutions considerable freedom in certain domains.

\n

- The vision is to promote “Academic, financial and administrative innovations” in these institutions by liberalising them (if they fulfil certain conditions).

\n

- Given the often stifling bureaucracy of higher education, GAP will be a significant stimulus for innovation in both public and private institutions.

\n

\n\n

## How is our system opening up to foreign collaborations?

\n\n

\n

- Traditionally, colleges and universities have been restricted from international collaboration, which is proving to be an obstacle to excellence.

\n

- **People** - Emphasis on attracting international students has been poor and only 47,000 foreigners study in India, in comparison to China’s 4 lakhs.

\n

- The new “Study in India initiative” seeks to attract international students mainly from a group of African and Asian countries.  
\n
- It seeks to improve India’s share of “global student mobility” from the current 1% to 2% in the near future.  
\n
- The Graded Autonomy programme makes it easier to hire international faculty, which was very difficult to do earlier.  
\n
- **Degree** - India is moving towards signing a pact on mutual recognition of academic qualifications with 30 countries.  
\n
- Recently, a government-to-government MoU was signed between India and France to mutually recognise academic qualifications.  
\n

\n\n

## What are the challenges?

\n\n

- Upgrading 20 or more Indian universities to world-class quality is big task and will take time and way more consistent funding than currently estimated.  
\n
- Further, autonomy will need to be greatly increased, which might be difficult as freedom from bureaucratic shackles of the government is not easy to attain.  
\n
- Innovative ideas from within top universities are another vital factor needed for ushering in progress, but there has been little evidence of this till now.  
\n
- Ensuring that universities have imaginative leaders within their ranks and deriving ideas from foreign models are other aspects that need attention.  
\n

\n\n

## What is the way ahead?

\n\n

- The national ranking initiative needs to be extended throughout the

higher education system and requires simplification for enhancing its ambit.

\n

- The “Study in India initiative” and proposals relating to relationships between Indian and foreign institutions are useful beginnings.

\n

- But more thinking must go into these ideas, and the focus on attracting students needs to be broadened beyond just Asia and Africa.

\n

- Innovation in course design is vital to attract students as students and post-docs from western countries might prefer taking up shorter-duration course.

\n

- Significantly, unlike China, India has the advantage of using English as the main language of higher education, an advantage that needs to be capitalised.
