

## Relook on 'Skill India'

### What is the issue?

\n\n

\n

- The Skill India was launched in July, 2015 with a roadmap for skilling 400 million people by 2022.

\n

- But the performance of the programme over the years had not been that encouraging.

\n

\n\n

### What are the shortfalls?

\n\n

\n

- A fundamental shortcoming was the lack of attention given to education while taking measures on skilling side.

\n

- In all successful countries - Germany, the UK, Japan or even China - skills and education remain closely connected.

\n

- India somehow missed this in 1977 when 10+2 was introduced by D S Kothari, the then UGC chairman.

\n

- It was done with vocational education as the central objective, in accordance with Education Commission Report (1964-66).

\n

- Unfortunately, there were few takers for vocational education.

\n

- It is primarily due to deep-rooted social prejudices against working with one's hands as it is considered lowly and demeaning.

\n

- As a result, over the years, the budgetary provisions for skills in schools dried up.

\n

- Today it exists in isolation as a scheme of the Ministry of Skills and Entrepreneur Development (MSDE).

\n

- Resultantly, the dream of streaming 50% students into the vocational side never materialised.

\n

\n\n

## **How did NSQF address this?**

\n\n

\n

- An attempt was made in 2010-13 with approval for the National Skill Qualification Framework (NSQF).

\n

- The Ministries of Human Resource Development (MHRD) and Labour and Employment (MoLE) jointly notified this.

\n

- NSQF is a framework under which skills are mainstreamed into the education system at the national level.

\n

- There are several advantages to NSQF, over the modular courses offered by the MSDE.

\n

- It streams students according to their aptitude and capacity into the general or vocational line from Class IX itself.

\n

- The certificates and diplomas granted by the MSDE and others are terminal in nature.

\n

- But the NSQF can lead a student to a bachelor's degree in vocational education (B.Voc).

\n

- It also seamlessly provides pathways between education, skills and the job market.

\n

- It thereby de-stigmatises vocational education by making it part-and-parcel of the school and university system.

\n

- General education subjects such as reading, writing, arithmetic and basic science provide the necessary basics.

\n

- NSQF also recognises prior learning, through which an estimated 20 million school dropouts can get a second chance.

\n

- The National Policy for Skill Development and Entrepreneurship 2015 also

highlights the importance of NSQF.

\n

\n\n

## **What are the continuing concerns?**

\n\n

\n

- Education and skilling continue to have the disconnect in policy approaches.
- Also, the role of Ministry of Skills and Entrepreneur Development (MSDE) is being perceived in isolation.
- The MSDE is finding it extremely difficult to tackle the huge task and target of skilling 400 million.
- The present target would have been less challenging with MHRD's capital and human resources, along with MSDE.
- [MHRD - 900 universities, 6,000 technical institutions, 3,200 polytechnics, 36,000 colleges, 1.55 million schools; MSDE - 10,000 ITIs]
- Skill India has also been afflicted by insufficient industry partners and the failure to attract genuine skill knowledge providers.
- The Apprenticeship Act, which has enormous potential, has also failed to enthuse the industry.
- Some estimates indicate placements figures as low as 5 to 10%.

\n

\n\n

## **What should be done?**

\n\n

\n

- The 10+2 needs to be implemented in its original spirit along with NSQF.
- Importantly, the MSDE's success as a ministry depends largely on its capacity to work closely with others.
- These include 18 ministries, the state governments and the industry partners, who are the real agents of Skill India.

\n

- National Council on Skill Development headed by the PM could play a crucial role in ensuring the working of NSQF in its true spirit.  
\n
- The university system can bring in uniformity throughout the country in terms of enforcing the National Occupation Standards and NSQF.  
\n
- Skill universities have started to spring up in many states.  
\n
- So without any delay, it is appropriate to have an apex body to ensure standardisation in this across the country.  
\n
- E.g. a National Skills University could be considered similar to what IGNOU did in the 1980s for Open and Distance Learning (ODL)
