

Reprioritise the Expenditure

What is the issue?

 \cdot The second wave of COVID-19 which currently sweeps India has forced states to announce lockdowns, affecting the economy.

 \cdot So the growth and the fiscal projections for 2021-22 budget requires a recalibration.

What are the projections in the GDP?

 \cdot The 2019-20 real GDP was Rs. 145.7-lakh crore at 2011-12 prices which fell to Rs. 134.1-lakh crore in 2020-21, a contraction of -8.0%.

 \cdot At 8.7% real growth, the nominal GDP growth would be close to 13.5%, which is lower than the nominal growth of 14.4% assumed in the Union Budget.

 \cdot At 13.5% growth, the estimated GDP for 2021-22 is Rs. 222.4-lakh crore at current prices.

 \cdot This will lead to a lowering of tax and non-tax revenues and an increase in the fiscal deficit as compared to the budgeted magnitudes.

What are the projections in the tax revenues?

 \cdot The budgeted gross and net tax revenues for 2021-22 were Rs. 22.2lakh crore and Rs. 15.4-lakh crore, respectively and the assumed buoyancy for the Centre's gross tax revenues (GTR) was 1.2.

 \cdot Even if this buoyancy is achieved, the lower nominal GDP growth would imply a GTR growth of 15.7% as compared to the budgeted growth of 16.7%.

 \cdot If, however, the buoyancy of 1.2 proves optimistic and instead a buoyancy of 0.9, the nominal growth of GTR would be 12.2%.

 \cdot This would lead to the Centre's GTR of about Rs. 21.3-lakh crore and a corresponding shortfall in the Centre's net tax revenues which is

estimated to be about Rs. 0.6 lakh crore.

What are the projections in the non- tax revenues?

 \cdot The budgeted magnitudes for non-tax revenues and non-debt capital receipts at Rs. 2.4-lakh crore and Rs. 1.9-lakh crore, respectively, may also prove to be optimistic.

 \cdot In these cases, the budgeted growth rates will be 15.4% and 304.3%, respectively.

 \cdot The excessively high growth for the non-debt capital receipts was premised on implementing an ambitious asset monetisation and disinvestment programme.

 \cdot The budgeted growth in non-tax revenues is largely dependent on an assumed growth of 60% in revenues from communication services & 44.1% in dividends and profits from non-departmental undertakings.

 \cdot Therefore there will be a shortfall of Rs. 1.5-lakh crore in non-tax revenues and non-debt capital receipts.

How will the fiscal deficit affected?

 \cdot There are two factors that will affect the fiscal deficit estimate of 6.76% of GDP in 2021-22.

 \cdot First, is the change in the budgeted nominal GDP growth and second is the shortfall in the receipts from tax, non-tax and non-debt sources.

 \cdot Together, these two factors may lead to a slippage in fiscal deficit which may be close to 7.7% of GDP in 2021-22 if total expenditures are kept at the budgeted levels.

 \cdot Therefore protecting total expenditures at the budgeted level is important given the need to support the economy in these challenging times.

What are the other steps needs to be taken?

 \cdot The second wave of the novel coronavirus has put a spotlight on India's serious under-capacity in health infrastructure.

 \cdot The Centre's 2021-22 Budget has provided for Rs. 71,269 crore for the Department of Health and Family Welfare, a fall of Rs. 7,597 crore when

compared to 2020-21.

 \cdot The allocation for the health sector should be increased substantially by reprioritising expenditures.

 \cdot Furthermore, strong support is needed for the vulnerable groups of the society- migrant labour, rural and urban unemployed population.

 \cdot Also speedy and larger vaccination coverage of the vulnerable population is the key to minimise economic damage.

 \cdot The entire vaccination bill should be borne by the centre as it's bargaining power would keep the average vaccine price low.

 \cdot It can then transfer the vaccines rather than the money that it has budgeted for transfer.
