

## Restoring Oxytocin Sale - Delhi High Court Order

### Why in news?

\n\n

The Delhi High Court has quashed a government ban on the retail sale and private manufacture of oxytocin. Click [here](#) to know more on the ban.

\n\n

### Why was the ban challenged?

\n\n

\n

- Union Ministry of Health and Family Welfare earlier notified the ban of oxytocin.

\n

- This was after widespread concerns with the misuse of the drug in dairy cattle, fruits and vegetables.

\n

- But the ban was opposed as oxytocin is a life-saving drug used to stop post-partum bleeding among new mothers.

\n

- Around 45,000 women die from post-partum complications in India each year, and in 38% of the cases, haemorrhaging is the reason.

\n

- Without the easy availability of inexpensive oxytocin, addressing the maternal mortality epidemic could have been difficult.

\n

- In fact, oxytocin had been listed by both the World Health Organization and the Health Ministry as an essential medicine.

\n

- So the All India Drug Action Network (AIDAN), a patient-rights group, challenged the government ban in the Delhi High Court.

\n

\n\n

### What is the Delhi High Court's rationale?

\n\n

- \n
- The ban came despite the fact that all statutory bodies, including the Drugs Technical Advisory Board, had advised against a ban.
- \n
- There was no scientific basis to the conclusion that oxytocin's existing availability/manner of distribution posed a risk to human life.
- \n
- So in response to AIDAN's and drug manufacturers' petitions, the court struck down the ban, calling it "unreasonable and arbitrary".
- \n
- It thus restored the retail sale and private manufacture of a life-saving drug, oxytocin.
- \n
- The government failed to weigh the adverse effect, to the public in general and women in particular, of possible restricted supply if manufacture is confined to one unit.
- \n
- The scarcity or even a restricted availability can cause increase in maternal fatalities, during childbirth.
- \n
- Notably, the Karnataka Antibiotics & Pharmaceuticals Limited (the only authorised producer after the ban) did not have the capability to manufacture it until mid-2017.
- \n
- The Centre has put down licensed manufacturers with a proven track record, while roping in this state firm with no real experience.
- \n
- It had also failed to show that the drug was widely misused for veterinary purposes, the actual reason behind the ban.
- \n
- Also, though the Centre claims to have made 25 illegal drug seizures across India in a 3-year period, 12 of them did not actually find oxytocin.
- \n
- Among those that did, none involved licensed drugmakers.
- \n

\n\n

## **What lies ahead?**

\n\n

- \n
- The whole oxytocin episode calls for the policy-makers to reflect on the process that led to the ill-conceived order.
- \n

- The basis for the Centre to overrule the advice of multiple statutory bodies should be investigated.  
\n
- The reason for the government to accept the reports of the drug's misuse without any valid proofs should be looked into.  
\n
- The country needs a relook on the mechanism for health policy-making, for it to safeguard the right to health of Indian citizens.
