

Revisit Tax Contributions by State

Why in news?

Union tax revenue among States is distributed by the Finance Commission based on equity and efficiency principles.

What is the issue?

- The Finance Commission recommends a distribution formula specifying each State's share in the part of the Union tax revenue assigned to States.
- Such distribution formulas have a few weighted determinants.
- Some States have been arguing that their contribution to the Union tax revenue have been higher and, therefore, they rightfully have higher shares in the Union tax revenue.
- In the first eight Finance Commissions, tax contribution with very little weight was a determinant in the distribution formula.
- Since the 10th Finance Commission, this **tax contribution was dropped** from the distribution formula.

*The Finance Commission is a constitutional body that was established under **Article 280** of the Indian Constitution.*

Why tax contribution is not a good indicator?

- **Income origin-** A person may pay income tax from one State though the income earning is from other States.
- **Low weightage-** Successive Finance Commissions have assigned 10% to 20% weight to income tax revenue collection/assessment in the distribution formula for income tax revenue because collection is not a good indicator of contribution.
- **Lack of data-** Due to the unavailability of proper consumption statistics, contribution was never a determinant in the distribution formula for Union excise duties.

What is the role of Finance Commission in tax revenue transfers?

- **State share in Union tax revenue-** Finance Commission devises a distribution formula based on the principles of equity and efficiency.
 - **Equity-** The revenue-scarce States and States with higher expenditures get larger shares of Union tax revenue than others.
 - **Efficiency-** Reward the States that are efficient in collecting revenue and rationalising spending.

HOW THE BOOTY IS DIVIDED

- **Tax contribution-** It is an efficiency indicator because a State's level of development and economic structure decides its tax contribution.
- **Population-** It is a chief indicator of the expenditure needs of the State, was given 80% to 90% weight in the first seven Finance Commissions as far as income tax distribution was concerned.
- **Union Excise duties-** The entire distribution was based on population or other indicators of expenditure needs such as area, per capita income etc.,

Since the 10th Finance Commission, the Commission has recommended a single distribution formula for both income tax and Union excise duties. Thus, the Finance Commissions have always favoured assigning more than 75% weight to equity indicators.

- **Pooled Central tax-** It included tax effort and fiscal discipline as efficiency indicators with a weight of 15%.
- **Tax effort-** It is broadly defined as the ratio of own revenue of a State to its Gross Domestic Product.
- **Fiscal discipline-** It is the proportion of own revenue to the revenue expenditure of a State.

How the tax contribution can be included in the distribution formula?

- **GST** - It is a consumption-based destination tax which is a good measure of tax contribution and efficiency of States.
- GST is a unified tax system which reflects the accurate tax base of each State and is not affected by discretionary policies.
- **Petroleum consumption**- It is another measure of tax contribution and efficiency, as it captures the relative share of Union excise and customs duties on petroleum products paid by each State.
- Both the GST and petroleum consumption indicate the relative differences in the incomes of the residents of each State, as consumption is a function of income.
- **Recommendation to 16th Finance Commission**- As both indicators account for large share of States' share in the Central tax revenue, they can be included in the distribution formula with a weightage of at least 33%.
