

## Rising Oil Prices

### What is the issue?

\n\n

International oil prices are heading higher with Brent crude oil futures trading at about \$70 a barrel.

\n\n

### What is the present trend?

\n\n

\n

- Oil had been selling at below \$45 in June.

\n

- It's now selling at \$70/barrel, making it a 55% rise in a matter of just months.

\n

- This is also a four-year high and a price increase of close to 6% since the start of 2018.

\n

- Early rise in prices were attributed to the supply decisions taken by oil producers like the OPEC members, which have suffered due to U.S. shale producers.

\n

- However the present rise seems more to be the result of a weakening of the U.S. dollar.

\n

\n\n

### Why has the dollar weakened?

\n\n

\n

- The dollar has been gradually weakening against major global currencies since the beginning of last year.

\n

- This was given a further downward push, when U.S. Treasury Secretary commented in favour of a weak-dollar policy.

\n

- At WEF meet he noted that a weaker dollar would be good for American trade.

\n

\n\n

## **How should India deal with this?**

\n\n

\n

- Consumers in India are already beginning to feel the pinch as petrol and diesel prices have hit multi-year highs.

\n

- However, the government should go back to its earlier policies of providing subsidies to ease the pain.

\n

- It should rather rationalise taxes on petrol and diesel to bring down retail prices.

\n

- This will help consumers without imposing an undue burden on the oil marketing companies.

\n

- Higher oil prices might also give hard time to government's fiscal management.

\n

- So the government should think for the long term of making India self-reliant.

\n

- It should fasten its hydrocarbon exploration and licensing policy (HELP) to expedite oil discovery and production.

\n

- Simultaneously, it must also actively support Indian energy firms' bids for overseas oilfields.
