

## Shale gas import

Click [here](#) to know about Shale Gas

\n\n

### Why in news?

\n\n

India will receive its first cargo of shale oil from the US, to be processed at an Indian Oil Corporation (IOC) refinery.

\n\n

### What are the recent developments?

\n\n

\n

- IOC had earlier received the first shipment to India, since the US stopped oil exports in 1975. Click [here](#) to know more.

\n

- The first cargo was conventional crude oil which is being processed at the Paradeep refinery in Odisha.

\n

- The second cargo has shale oil and will be landing at Vadinar port in Gujarat.

\n

- The shale oil will be refined at one of IOC's refineries in Gujarat, Panipat, or Agra.

\n

- Indian companies have contracted close to 8 million barrels of crude oil from the US.

\n

- Besides oil, Gas Authority of India (GAIL) will be bringing in the first cargo of liquefied natural gas from the US to India early next year.

\n

\n\n

### What is the significance?

\n\n

\n

- Petroleum product consumption in India has been growing consistently in the last few years.

\n

- India has begun to contract crude oil from the US as part of its strategy to diversify oil sourcing.

\n

- India finds US crude oil to be relatively competitive in terms of price.

\n

- The Trump administration also believes that oil and gas trade has the potential to increase bilateral trade between the two countries.

\n

\n\n

### **How does the trade work?**

\n\n

\n

- Crude oil import by state-owned refiners follow the usual FOB (free on board) import pattern.

\n

- However, the US crude cargoes are being shipped on a cost-and-freight (C&F) arrangement.

\n

- Under this, the contractor i.e. the Indian companies are responsible for the transportation.

\n

- And for this, they have to take special permission from the Ministry of Shipping.

\n

- The overall cost of US crude oil is found to be cost-effective under this arrangement.

\n

\n\n

## Prospective basins for phase 1 shale oil and gas exploration

\n\n

### Quick Facts

\n\n

### Cost, Insurance and Freight (CIF) and Free on Board (FOB)

\n\n

\n

- These are international shipping agreements used in the transportation of goods between a buyer and a seller and differ in who assumes liability for the goods during transit.

\n

- In CIF agreements, insurance and other costs are assumed by the seller; goods are not considered to be delivered until they are in the buyer's possession.

\n

- FOB contracts relieve the seller of responsibility once the goods are shipped; the buyer then assumes all liability.
