

## **Shift towards Electric Powered vehicles**

### **What is issue?**

\n\n

The automobile industry is planning to shift its focus from fossil fuels powered vehicles to electric powered vehicles.

\n\n

### **What are the challenges?**

\n\n

- \n
- Affordability of e-vehicles (EVs) as they are presently costly
- \n
- Range they can cover on a single battery charge is currently limited.
- \n
- Finding the natural resources such as lithium, cobalt and nickel to make recyclable batteries is difficult.
- \n
- There is also the question of the sustainability of making millions of batteries that must be recycled.

\n

\n\n

### **What has been the progress so far?**

\n\n

- \n
- The technological limits of the power source are being pushed constantly i.e less material is being used to produce higher energy density, and at lower cost.
- \n
- Tesla had set its goal to mass-market electric cars that are efficient on range, and offer a minimum of 340 km on one charge.

\n

\n\n

\n

- Many major automobile manufacturers have announced plans for electrics.

\n

- France, announced recently that it will end the sale of petrol and diesel cars by 2040.

\n

\n\n

## **What should be done?**

\n\n

\n

- India, could give electro-mobility a boost through declaring its policy on EVs soon.

\n

- Electric two-wheelers and public transport buses can be made attractive through tax incentives.
