

# **Significance of Deworming**

#### Why in news?

 $n\n$ 

Ministry of Health and Family Welfare (MoHFW) conducts deworming drive twice a year.

 $n\n$ 

#### What is Deworming?

 $n\n$ 

\n

- Deworming is a process to kill worms commonly tape, round and hook worm, that infest bodies of children below 18 years of age.
- As per the guidelines, children aged below two years are given 200 gm of Albendazole tablet, a drug to treat parasitic worm infestation, and schoolgoing children are administered 400 mg tablets.
- The Albendazole tablet paralyses the muscles of these worms, the worm loses its grip of intestinal tract and is flushed out of the human body.
- A worm takes six months to mature and start sucking, therefore the exercise is carried out biannually.
- Deworming has no serious side effects, but it can cause nausea and vomiting if a child has worms.
- The medicine disrupts the worms which leads to uneasiness in the stomach.

## Why is the significance of deworming?

 $n\n$ 

\n

• Parasitic worms and their larvae are generally found in contaminated food and water.

۱'n

- $\bullet$  In slums children walk bare feet and they frequently contract worms.
- The worm first enters the blood circulation system and its larvae land up in the larynx, from where it finally reaches the gastrointestinal tract.
- $\bullet$  The hook, round and tapeworm grow by sucking blood from its host in this case the human body.  $\mbox{\sc h}$
- Loss of blood leads to a drop in haemoglobin level and causes anaemia, thus deworming kills these worms and helps prevent anaemia.
- The National Family Health Survey-3 data suggests anaemia is widely prevalent in all age groups.
- Its prevalence is 56 per cent among adolescent girls (aged 15-19) and 70 per cent among children below five years.

### What are the other initiatives of government in this regard?

 $n\n$ 

\n

- Under the National Iron Plus Initiative Union Health Ministry is providing weekly dose of iron and folic acid tablets to children aged 1-18 years.
- $\bullet$  This is to prevent iron deficiency and chances of anaemia.  $\ensuremath{\backslash n}$
- Various municipal schools in India conduct this drive by giving a weekly dose of 100 mg iron and 500 mg folic acid to adolescents (10-19 years), dosage varies for different age groups.
