

Telecom consolidation

What is the issue?

\n\n

\n

- The shareholders of Idea Cellular have approved the company's proposed merger of its mobile business with Vodafone India.

\n

- Tata groups recently announced that it would sell its consumer mobile business to telecom operator Bharti Airtel Ltd.

\n

- With the range of consolidations happening in the Indian Telecom sector, it is witnessing a change of phase.

\n

\n\n

What are the recent developments?

\n\n

\n

- The telecom sector had around 9-10 mobile operators in each circle just a few years ago.

\n

- However, with the range of consolidations happening now, this is now set to go down to 3-4 mobile operators.

\n

- Recent mergers and acquisitions include that between Vodafone & Hutchison Essar, Telenor & Unitech Wireless, Reliance & Aircel, Airtel & Tata, etc.

\n

- The latest proposal to merge Vodafone and Idea Cellular is expected to take this progress to next level.

\n

\n\n

Why is this so significant?

\n\n

\n

- The merger can conclude only after the National Company Law Tribunal (NCLT) grants approval.
\n
- If the merger materialises, the number of **private players** in the Indian telecom space would decline to three.
\n
- The four players expected to remain are Airtel, Reliance Jio, Vodafone-Idea combine and the state-owned BSNL.
\n
- A limited operators market would generate the optimum balance of **competition and investment**.
\n
- Airtel, Reliance Jio and the Voda-Idea combine will **compete** for the lucrative **data services market**, setting the stage for a three-way battle.
\n

\n\n

Why is this an unhealthy sign?

\n\n

- Consolidations are expected to fare well in terms of revenue, return on equity and encouraging infrastructure-based competition.
\n
- However, the factors that had driven earlier consolidations and those behind the ongoing ones are different.
\n
- The twin troubles of high spectrum costs and intense pricing pressures led by Reliance Jio have hit hard the Indian telecom sector.
\n
- Resultantly, most of the deals are in the nature of **distress sales by loss-making companies**.
\n
- E.g. Jio's entry triggered exits by the weaker players and merger of smaller incumbents (Idea and Vodafone).
\n
- The current consolidations had led to huge **value destruction** and had been painful for those exiting.
\n
- Another serious implication is the **impact on jobs**.
\n
- According to a market estimate, as many as 30,000 jobs could be at stake from the ongoing consolidation.
\n

- Also, unsuccessful mergers could lead to disruptions in the telecom operations.

\n

\n\n

What lies ahead?

\n\n

\n

- Consolidation, if it was done as a natural progression than being forced due to market disruption by one operator, is good.

\n

- Given all these, it is expected that after the initial pain, the consolidation would augur well for the telecom industry.

\n

- The surviving three to four operators could emerge stronger, to capitalise on the huge potential that data services would bring.
