

The Need for New National Textile Policy

What is the issue?

\n\n

Indian textile sector is undergoing a huge contemporary changes but the last official national textile policy was framed 17 years ago.

\n\n

How important is textile industry?

\n\n

\n

- India's textile sector has the second-largest employment after agriculture, **employing 32 million workers.**

\n

- It has the potential to double this employment in the next seven years as per the vision document (for 2024-25).

\n

- It is a sector which provides livelihoods to millions of households.

\n

- It is also a storehouse of traditional skills, heritage, and a carrier of heritage and culture.

\n

\n\n

What is the reason behind India's slowdown?

\n\n

\n

- India has a rich mix of synthetic and natural fibres and yarns, but still **it remains a cotton-focused country.**

\n

- India was finding it profitable to export raw cotton to China because of Chinese government's support for stockpiling cotton yarn.

\n

- Also, the presence of cotton in yarn, fibre, fabric and garments is close to 70% of usage within India, which is also reflected in exports.

\n

- But, the global trend is exactly the opposite, i.e., it has 70% of synthetics and man-made fibres.
\n
- So, **India's domestic and export mix is the opposite of global fashion and demand trends.**
\n

\n\n

What is the reason behind India's inverse trend?

\n\n

- \n
- The inverse skew of fibre usage in India is due to the **skewed tax treatment.**
\n
- Until the roll-out of the GST, the cotton value chain was completely free of indirect taxation.
\n
- Whereas the **man-made fibre suffered a dead-weight tax** of 12% excise.
\n
- That anomaly was supposed to be removed by uniform GST.
\n
- Instead of a fibre-neutral policy, we have a dual GST structure, with 18% GST on upstream, and 5% on all downstream, leaving an inverted duty structure.
\n
- This has already led to much disruption, as can be seen in shutdowns or strikes in powerloom clusters in Bhiwandi or Coimbatore.
\n

\n\n

Why there is an urgent need for a policy document?

\n\n

- \n
- Textiles, along with agriculture, construction and tourism, has **large-scale job creation potential.**
\n
- It is a sector dotted with small and medium enterprises, which make up 80% of the units.
\n
- Thus, it is ideally positioned to be a poster child for 'Make In India'.
\n
- This is also a sector which is undergoing a huge change due to automation,

digital printing and the relentless rise of e-commerce.

\n

- These developments threaten to **completely change the face of this industry.**

\n

- India's share of textile exports in total exports (at 12%), is half of what it was in 1996.

\n

- Bangladesh's garment exports exceeded India's in absolute terms back in 2003 and today, it exports twice that of India.

\n

- Even **late starter Vietnam overtook India** in 2011.

\n

- So, to address challenges like changing consumer and fashion trends, modernization of machinery, skill upgradation, a fibre-neutral tax policy and meeting the needs of the e-commerce phenomenon, we need a national policy and implementation plan.
