

Towards climate-resilient agriculture

What is the issue?

 $n\n$

Efforts to make agriculture climate-resilient must be scaled up and consolidated in order to avoid the impacts of a warming world.

 $n\n$

What does the IPCC report say?

 $n\n$

\n

- The Special Report on Global Warming of 1.5°C was recently approved by the Intergovernmental Panel on Climate Change (IPCC).
- The report focusses on keeping warming to under 1.5°C as compared to preindustrial times.

\n

- The world has already warmed 1°C since pre-industrial times.
- \bullet Hence, limiting warming to <u>0.5°C from now</u> means the world can keep the ecosystems much as it is now.
- Adding another 0.5°C on top of that essentially means a different and more challenging Earth for people and species.

 $n\n$

Why is India vulnerable?

 $n\n$

\n

 India's agricultural ecosystem is distinguished by high monsoon dependence and with 85% small and marginal landholdings, it is highly sensitive to weather abnormalities.

• There has been less than normal rainfall during the last four years, with 2014 and 2015 declared as drought years.

\n

- Even the recent monsoon season (June-September) ended with a rainfall deficit of 9%, which was just short of drought conditions.
- There are also reports of an escalation in heat waves, which in turn affecting crops, aquatic systems and livestock.
- The <u>Economic Survey</u> 2017-18 has estimated farm income losses between 15% and 18% on average, which could rise to 20%-25% for unirrigated areas without any policy interventions.
- \bullet These projections underline the need for strategic change in dealing with climate change in agriculture. $\mbox{\sc h}$

 $n\n$

What are the steps needed?

 $n\n$

\n

• **Interventions** - Apart from traditional wisdom, farm extension services and climate resilient technologies should guide farmers' responses to climate change.

۱n

• The climate resilient techniques could include solar pumps, drip irrigation and sprinklers, which involves minimum consumption of electricity and water.

\n

• Climate exposure can also be reduced through proper agronomic management practices such as inter cropping, multiple cropping and croprotation at the field level.

\n

 $n\n$

\n

\n

- Awareness The NSS 70th round indicates that a very small segment of agricultural households utilised crop insurance due to a lack of sufficient awareness and knowledge.
- Hence there is an urgent need to educate farmers by reorienting Krishi Vigyan Kendras with specific and more funds about climate change and risk-coping measures.
- Framework Climate adaptations are to be mainstreamed in the current

developmental framework which is still at a nascent stage. (Economic Survey 2017-18).

۱n

- Mainstreaming adaptation into the policy apparatus will enable identification of several barriers that prevent up-scaling efforts and adaptation by farmers.
- Other initiatives towards building greater resilience in agriculture should include -

\n

 $n\n$

\n

1. Expansion of extension facilities

2. Improving irrigation efficiency

\n

3. Promotion of satellite-enabled agriculture risk management

4. Creating micro-level agro-advisories

\n

5. Providing customised real time data

6. Capacity building of stakeholders

 $n\$

What is the importance of SAPCC in this regard?

 $n\n$

\n

• The State Action Plans on Climate Change is an important platform for adaptation planning.

\n

- Under it, states are encouraged by the centre to come up with innovative and scalable projects to develop resilience against climate change and mainstream it in the planning processes.
- Some of the components under these schemes are getting converged with major rural developmental programmes of the centre, which will further enhance their effectiveness at the grass-root level.
- However, it needs to evolve further in terms of climate-oriented regional analysis to capture micro-level sensitivity and constraints.

 \bullet Thus, greater expertise and consultations are required here for systematic prioritisation of actions to build a climate resilient agriculture. \n
