

Universal exchanges - Part II

Click [here](#) for Part I

\n\n

Why in news?

\n\n

SEBI has finalised norms for universal exchanges.

\n\n

What are the advantages of Universal exchanges?

\n\n

\n

- The value of trades in commodity derivatives is just 3 per cent of the traded value of equity derivatives.

\n

- If the traders in equity segment shift some trades to commodities, trading volumes will receive a boost and it will also have a check on trade malpractices.

\n

- It improves the credibility of the commodity derivative market as larger number of participants will have a better price discovery.

\n

\n\n

How Universal exchanges can promote agri trade?

\n\n

\n

- Currently, agri futures account for around 11 per cent of the traded volume on exchanges with the rest of the turnover coming from trading in metals, bullion and energy.

\n

- Many seasoned traders avoid trading in agri commodities due to low turnover, lack of a robust spot market, higher speculation and frequent regulatory intervention.

\n

- Non-agri commodities, on the other hand, are linked to international prices and are easier to track and transact in.

\n

- SEBI's recent move on Universal exchanges will ensure that the national exchanges facilitate trading in both agri and non-agri commodities.

\n

- Boost in agri products trade will provide an avenue for farmers to sell their produce and hedge risk.

\n

- Enabling trading in agri commodities will also entail investments in establishing warehouses and setting up a network for spot polling to discover price.

\n

- The national exchanges would also be encouraged to invest in this infrastructure and improve the reach and awareness about commodity derivative products.
