

## UPSC Daily Current Affairs | Prelim Bits 04-03-2021

### Aries-Devasthal Faint Object Spectrograph

- Aries-Devasthal Faint Object Spectrograph & Camera (ADFOSC) is an optical spectrograph, which is indigenously designed and developed by Aryabhata Research Institute of observational sciences (ARIES).
- This low-cost spectrograph, India's largest astronomical spectrograph, has been commissioned on the Devasthal Optical Telescope (DOT).
- It can **locate extremely faint light sources** from distant quasars and galaxies in a very young universe, regions around supermassive black-holes around the galaxies, and cosmic explosions.
- It uses a complex arrangement of lenses made of glasses, polished to better than 5-nm smoothness to produce sharp images of the sky.
- Photons coming from distant celestial sources, collected by the telescope, are sorted into different colours by the spectrograph.
- Then, this will be converted into electronic recordable signals using an in-house Charge-Coupled Device (CCD) camera cooled to  $-120^{\circ}\text{C}$ .

### India faces U.S. Anti-Dumping Tax

- **Anti-dumping duty** is a protectionist tariff that a domestic government imposes on foreign imports that it believes are priced below fair market value.
- The US Department of Commerce would impose anti-dumping or countervailing tax on aluminium sheet exporters from 18 countries as they had benefited from subsidies and dumping.
- According to the U.S. investigation, imports from India have benefited from subsidies for 35% to 89%.
- So, India and 17 other countries would face the U.S. anti-dumping tax.

### Arktika-M Satellite

- Russia launched its space satellite Arktika-M from Kazakhstan by a Soyuz-2.1b carrier rocket with the Fregat booster.
- This is a remote-sensing and emergency communications satellite.
- It was launched to monitor the climate and environment in the Arctic.
- It will have a highly elliptical orbit that passes over northern latitudes allowing it to monitor northern regions for long periods before it loops back

down under Earth.

- It will retransmit distress signals from ships, aircraft or people in remote areas as part of its Cospas-Sarsat satellite-based search and rescue programme.
- Russia plans to send a second satellite in 2023. These two will offer round-the-clock, all-weather monitoring of the Arctic Ocean and Earth's surface.

## **Platypus**

- To promote breeding and rehabilitation of platypus that faces extinction due to climate change, the world's first platypus refuge would be built in Australia.
- Platypus is one of the five species of monotremes, the only mammals that lay eggs instead of giving birth to young ones.
- This duck-billed mammal is the only animal in the world to have a beak, fur and webbed feet.
- It is endemic to eastern Australia, including Tasmania, where it is classified as an endangered species.
- International Union for Conservation of Nature (IUCN) Red list Status - **Near Threatened**.

## **NDC Synthesis Report**

- The UN Framework Convention on Climate Change (UNFCCC) has released the Nationally Determined Contributions (NDC) Synthesis Report.
- In this report, the UNFCCC has updated the NDC till December 31, 2020 for 75 of the 197 Parties to the UNFCCC.
- These Parties account for 30% of the global greenhouse gas (GHG) emissions.
- The UK and the European Union are the only regions among 18 of the world's biggest emitters that have substantially increased their GHG reduction targets.
- Sixteen of the world's biggest emitters have not increased their emission reduction targets substantially or at all.
- UNFCCC called for more ambitious climate action plans by the countries to achieve the Paris Agreement target of containing global temperature rise to 2°C (ideally 1.5°C) by the end of the century.

## **Bangladesh - LDC to a Developing Country**

- The UN Committee for Development Policy (CDP) has recommended graduation of Bangladesh from the category of Least Developed Country (LDC) to the category of Developing Country.

- The CDP decides on the LDC status of a country based on three criteria,
  1. Per capita income,
  2. Human Assets Index,
  3. Economic Vulnerability Index.
- A country must achieve two of the three criteria at two consecutive triennial reviews to be considered for graduation.
- Bangladesh has met for the second time all the three eligibility criteria for graduating from the LDC category to the developing nations category.
- This proposal will be sent to the UN Economic and Social Council (ECOSOC) for endorsement, late to the UN General Assembly (UNGA).
- Usually countries are given 3 years for transition but this year due to the pandemic, Bangladesh has been given 5 years i.e. upto 2026.
