### Bhu-Aadhar or ULPIN

*Rural development ministry's portal data reveals that only 30% of the rural land parcels have Bhu-Aadhaar, Centre pushes for 100% completion by 2026.*

- Bhu-Aadhaar is also known as **Unique Land Parcel Identification Number (ULPIN)**.
- **Launched in** - 2021.
- **ULPIN** - It is an initiative to give a **14-digit alpha-numeric identity** to each land parcel. The ULPIN contains
  - State code
  - District code
  - Sub-district code
  - Village code
  - Unique plot ID number
- It is generated using the longitude and latitude coordinates of the land parcel.
- It is part of the Centre's **Digital India Land Records Modernisation Programme (DILRMP)**.

*DILRMP is a Central Sector Scheme aims to modernize the management of land records, reduce land/property disputes, and enhance transparency in land transactions.*

- ULPIN is to streamline and bring uniformity to the process adopted by states in assigning unique identification numbers to land parcels.
- Once the ULPIN is generated, it is stamped on the physical land record document held by the owner.
- The same ULPIN will be permanently attached to the plot of land.
- Even if the land is transferred, sub-divided, or undergoes any change, the ULPIN will remain the same for that geographic boundary.
- **Objectives**
  - To assign a unique ID to each plot of land for easy identification and retrieval of records
  - To create accurate digital land records with details of land owners, plot boundaries, area, usage, etc.
  - To link land records and property registration processes
  - To facilitate online delivery of land record services
  - To assist in government planning by maintaining updated land data
- **Coverage** - **Andhra Pradesh** was the 1<sup>st</sup> State to complete 100% ULPIN coverage.
- The States of Karnataka, Odisha, Telangana, Madhya Pradesh and Chhattisgarh have achieved 60-90% ULPIN coverage.
- Uttar Pradesh, Bihar and Assam are lagging behind in ULPIN implementation due to administrative and operational challenges.

## Great Eared Nightjar

*The Great Eared Nightjar is one of the most mesmerizing creatures, due to its striking resemblance with a mythical dragon, especially when perched.*

- The Great Eared Nightjar is a dragon-like appearance bird **native to Southeast Asia.**
- **Scientific Name** - *Lyncornis macrotis*.
- **Family** - Caprimulgidae.
- **Nomenclature** - The name 'nightjar' comes from the bird's **nocturnal** habits and its calls are often called as jarring.
- **Appearance** - They have large, forward-facing eyes, big head, and intricate patterning of brown, black, and gray on its feathers.
- It has a white throat band but has no white on its wings or on its tail.
- **Habitat** - These birds prefer to dwell in thick forests, woodlands and mangroves. Instead of making nests really high up on trees, they typically roost on the ground or low branches.
- **Distribution** - It can be found roaming the skies from parts of India and Sri Lanka to the Malay Peninsula, the Philippines, and Indonesia.
- **Diet** - Insectivores include moths, beetles, and other nocturnal insects.
- **Breeding** - They blend into surroundings easily and lay eggs on the ground.
- **Flight** - Nightjars are well known for their **silent flight**, which is due to the structure of their feathers.
- Hence they can easily sneak up on their prey and also move away without anyone noticing, if faced with a potential threat.
- **Conservation status**
  - **IUCN** - Least Concern.
- **Threat** - Habitat loss.

# World Polio Day

World polio day was organized recently by Rotary International in collaboration with global health organisations like the World Health Organization (WHO) and UNICEF.

- World Polio Day is observed annually on **October 24**.
- The Day was established by Rotary International to commemorate the birth of **Jonas Salk**, who led the first team to develop the vaccine against the disease in the 1950s.
- **Aim** - To raise awareness about the importance of polio vaccination and to recognize progress made toward a polio-free world.
- **Theme, 2024** - A Global Mission to Reach Every Child.

## Polio

- Polio (Poliomyelitis) is a **highly viral infectious disease**, mainly affecting children **under 5**.
- **Transmission** - The virus is spread from person to person, mainly through the faecal-oral pathway or, less frequently, by a shared object (such as contaminated food or water).
- It multiplies in the intestine, from where it can enter the nervous system and cause paralysis.
- **Severity** - There are cases of paralytic poliomyelitis due to a loss of viral attenuation in the oral polio vaccine (OPV), known as vaccine-associated paralytic poliovirus (VAPP).
- Vaccine-associated paralytic poliovirus (VAPP) is very rare, occurring approximately 3.8 times per lakhs of cases in countries using the oral poliovirus vaccine. It can cause sometimes death.
- **Prevention** - Along with vaccination, it is required to wash hands, boil drinking water, and give only breastmilk to babies under 6 months of age.

*Over the past 35 years, cases of wild poliovirus have decreased by more than 99%.*

- There is **no cure** for polio, it can only be prevented through a vaccine.
- **Vaccination**
- **Inactivated Polio Vaccine (IPV)**
  - **Developed by** - Jonas Salk in 1955.
  - **Administration** - Given via injection.
  - **Characteristics** - IPV contains a killed virus, making it safe but less effective at inducing immunity in the intestines compared to oral vaccines.
- **Oral Polio Vaccine (OPV)**
  - **Developed by** - Albert Sabin in the early 1960s.
  - **Administration** - Administered orally, often in a sugar cube form.
  - **Characteristics** - OPV contains a weakened live virus, which not only protects the vaccinated individual but can also help immunise others in the community through "herd immunity."
- **In India** - In 2009, India had reported 741 polio cases, the highest in the world. In January 2011, India reported its last polio case.
- India was declared polio-free in 2014 by the World Health Organization (WHO).

## Global Polio Eradication Initiative

- The Global Polio Eradication Initiative (GPEI) is a public-private partnership that aims to eradicate polio worldwide.
- **Goal** - To ensure that no child will ever be paralyzed by polio.
- **Partners**
  - Led by national governments, the GPEI's partners include:
    - World Health Organization (WHO)
    - Rotary International
    - US Centers for Disease Control and Prevention (CDC)
    - United Nations Children's Fund (UNICEF)
    - Bill & Melinda Gates Foundation
    - Gavi, the Vaccine Alliance
- The GPEI uses a monitoring and evaluation (M&E) matrix to track progress and adjust to risks. The matrix includes milestones, outcomes, and key performance indicators (KPIs).

## India-China LAC Agreement

*India has announced a pact on patrolling along the LAC, which is expected to set in motion the process ultimately leading to normalization.*

- India and China have made progress in resolving the military standoff along the Line of Actual Control (LAC) in ***eastern Ladakh***, with both nations reportedly agreeing to restore patrolling rights.
- **Regions** - Depsang Plains and Demchok region, allowing their troops to resume patrolling up to their old patrolling points along the LAC.
- The frictions between the two sides in the Depsang Plains and Demchok region have long been regarded as "legacy issues" predating the Chinese incursions of 2020.
- The Depsang Plains are located in the north of Ladakh and Demchok in the south.
- At present, 7 friction points exist in eastern Ladakh.
- These include PP 14 (Galwan), PP 15 (Hot Springs), PP 17A (Gogra), the north and south banks of Pangong Tso, the Depsang Plains, and Charding Nullah in Demchok.
- The agreement allows Indian troops access to patrolling points (PP) 10 to 13 in the Depsang Plains, while in Demchok, patrolling will extend to Charding Nullah.
- Mutual agreements have reportedly been reached for the eastern theatre as well, particularly in sensitive areas of Arunachal Pradesh.
- Friction points like Galwan Valley and Pangong Tso remain unchanged.
- Further discussions on other sectors in the eastern region will also take place between the two sides at a later stage.
- Moreover, both sides will exchange their patrol schedules with each other.
- In case of conflicting dates or times, adjustments will reportedly be made by mutual consent.

## Lake Erie

*Algae bloom in western Lake Erie was moderate compared to previous years, getting rid of problem algae starts with giving it less food.*

- Lake Erie is one of the **5 Great Lakes of North America** and the 4<sup>th</sup> largest by surface area.
- It is located on the border between **Canada and the United States**.
- It is primarily bordered by the states of Ohio, Pennsylvania, and New York, as well as the Canadian province of Ontario.
- Lake Erie is the **shallowest of the Great Lakes**, which contributes to its warmer temperatures and greater susceptibility to pollution and algal blooms compared to the other lakes.
- **Tributaries** - The Detroit, Huron, and Raisin rivers are the main tributaries to Lake Erie.
- **Discharge** - The Niagara River carries the water from Lake Erie to the east.
- It is a key part of the St. Lawrence Seaway.
- **Pollution** - The Great Lakes have been affected by pollution, and in the late 20th century, the U.S. and Canada investigated ways to reverse the damage.
- **Ice levels** - The Great Lakes have experienced historically low ice levels for two years in a row.
