

# US banking crisis, global slowdown and its impact on India

## Why in news?

Sajjid Chinoy, Chief India Economist, JP Morgan, and part-time member, PMEAC spoke about the US banking crisis, global slowdown and its impact on India.

#### What are the differences between 2008 economic crisis and 2023 bank stress?

- The Economist pointed out few differences between the banking stress witnessed in March (2023) and that in 2008.
  - 1. The mid-sized US banks primarily faced a liquidity crisis in March 2023 whereas in 2008 the banks faced solvency concerned.
  - 2. The second difference between 2023 and 2008 is the sheer resilience of the global economy in 2023.

# What is the US banking crisis?

- **US Banks** The massive fiscal and monetary stimulus after COVID led to a huge surge in bank deposits.
- Banks invested much of these in government bonds to avoid credit risks.
- Meanwhile, the fiscal and monetary stimulus interacted with adverse supply shocks led to the highest global inflation in 50 years.
- To control inflation Central banks followed aggressive monetary tightening cycle.
- Consequently, the bond prices fell sharply and the US banks were left with 'unrealised bond loses'.
- **Silicon Valley Bank** Wholesale depositors began to rapidly withdraw deposits to avoid losses, forcing the bank to realise the losses.
- The bank created a self-fulfilling deposit run and the central bank came to rescue.
- The central bank created expansive liquidity facilities and de facto insured all deposits creating moral hazard for the medium term.

## How resilient is the present economy?

- The global economy likely grew at 4% last quarter (2023).
- The pace at which global economy is accelerating in 2023 reflects the resilience of private sector balance sheets in advanced economies.
- Globally, banks are much better regulated and capitalised than they were in 2008.
- The central banks will now have to pursue two objectives to avoid any recession:
  - Contain inflation using interest rate policy while managing financial stability.

#### What are the impacts of US bank stress on India?

- **Soft-landing** A soft landing is a cyclical slowdown in economic growth that avoids recession.
- Soft landing is unlikely in the US because it will necessitate sharp increase in wage inflation without noticeable rise in the unemployment rate.
- At some point the global economy will be forced to slow, to generate the needed disinflation, and that will impact India.
- There are multiple transmission channels from current global events to impact India.
- The channels are exports, commodity prices, capital flows, US bond yields on Indian bond yields, etc.

# What is the impact of global slowdown on the Indian exports?

- **Indian Exports** Software services and other IT-enabled services have shown dynamism.
- Increased digitalisation and work-from-home during the pandemic has increased offshoring and made services previously deemed non-tradeable into tradeable.
- The surge in service exports and the softening of commodity prices has also contributed to the dramatic compression of the current account deficit.
- Thus, exports have been key to India's recovery and a sharp global slowdown will slow down its recovery.

## What are the natural hedges that India has?

A natural hedge is a strategy that seeks to mitigate risk by investing in assets whose performance is negatively correlated through some intrinsic or natural mechanism.

- As a commodity importer, India benefits from several natural hedges
- Oil prices Oil prices are typically inversely correlated with the US dollar Index
- When the dollar index strengthens, oil prices typically soften.
- Due to this natural hedge, India gets adversely impacted on the capital account but favourably impacted on the current account.
- Imports-Exports If there's a demand shock in the world and global growth slows, India's exports will be hit.
- As a commodity importer, India can benefit from improving 'terms of trade' when the commodity prices depress due to slow in global growth.
- **Bond Yields** Decline in US bond yields in response to the banking crisis, pushed down bond yields around the world, including India.
- In India, and other emerging markets, financial conditions eased due to the fears of weaker US growth.

# What are policy changes prescribed for India?

- Public investment should be pushed to mitigate slowing exports.
- Crowding in of states and PSU capital expenditures (capex).

- Keeping inflation under control, continuing with fiscal consolidation and building buffers.
- India should keep a very close eye on financial stability.
