

# **U.S. Missiles Light Up Damascus**

#### What is the issue?

 $n\n$ 

\n

- U.S. has recently launched missiles against select locations in the Syrian capital Damascus which risks escalating the conflict.
- Significantly, this was in response to the alleged chemical attack by the Syrian government forces against its own citizens in rebel held territories.

 $n\$ 

### What was the attack about?

 $n\n$ 

۱n

- U.S. president Donald Trump had threatened the Syrian government with the threat of military action if chemical weapons were used.
- In mid 2017, when there was a suspected chemical attack in Idlib province, the U.S. had fired 59 cruise missiles at a government airbase.
- Despite this, the government forces allegedly carried out another chemical attack recently on rebel control "Douma region" near Damascus.
- Consequently, the US in alliance with UK and France decided to launch an attack against selected targets to punish the Assad regime.
- Over 100 missiles were fired at three regime facilities to completely destroy Syria's chemical weapons program.
- After the attack, the US has stated that its mission was a success and that it doesn't intend to follow up with further attacks.

 $n\n$ 

### Was the protocol followed?

\n

• While the use of chemical agents against civilians deserves harsh punishment, the manner in which the U.S. and its allies have acted raises serious questions.

\n

- Significantly, Organisation for Prohibition of Chemical Weapons (OPCW) hasn't even begun its investigation on the alleged chemical attack on Douma.
- The proper procedure would've been to wait for OPCW (inter-governmental watchdog) to probe the veracity of the alleged chemical attack.
- $\bullet$  The US and its allies should've then approached the UN Security Council with requisite evidence and sought an approval for an assault.  $\mbox{\sc h}$
- But contrarily, the US alliance seems to have acted merely on the basis of inputs from their intelligence agencies (which is a breach international law).

 $n\n$ 

### What are the risks?

 $n\n$ 

\n

- While Mr. Trump has already trumpeted that the US mission was a success, the statement seems to lack solid grounds.
- Notably, the previous US attack was also intended to dissuade Syria from using chemical weapons - which clearly has failed.
- Hence, if the Syrian regime was to resort to another chemical misadventure, the US would be forced to intervene again with more might.
- Such actions might drive the US more into the viscous Syrian entanglement and increase the risk of a direct conflict with Russian troops there.
- In fact, Russia has been strongly and consistently positioning itself behind Assad and the Syrian regime, which is a major worry.

 $n\n$ 

## What is the way ahead?

 $n\n$ 

\n

- $\bullet$  The war is already 7 years old and more than 4 lakh people have died.
- There is no dispute that Mr. Assad is presiding over a monstrous military machine that has used brute force against his own people.
- $\bullet$  But the Syrian maze is so complex that a sudden collapse of the regime would push the country into further chaos and make things worse. \n
- Significantly, more bombs and missiles would put the millions who currently live in the relatively stable regime held territories under risk.
- $\bullet$  It is high-time that the West shifts from unilateral and coercive military action to aggressive multilateral diplomacy to end the unfolding misery. \n
- The only way out is for Russia and US to get to the negotiating tables for immediately stopping the violence and negotiating a long-lasting peace.
