

## **US Shutdown - US-Mexico Border Wall Issue - II**

Click [here](#) for Part -I

\n\n

### **What is the issue?**

\n\n

\n

- The partial US shutdown, which started in December, 2018, is reaching almost a month now, with no resolution in sight yet.

\n

- This partial shutdown is getting to be the longest in the history of the US, with economic implications getting severe.

\n

\n\n

### **What is the economic impact?**

\n\n

\n

- In the period of the shutdown, there was a mixed reaction from the markets.

\n

- While the US Dollar Index fell by 0.5%, the S&P 500 improved by 11% after a stock market crash in December, 2018.

\n

- The 10-year bond yields softened only marginally in the same period to 2.7%.

\n

- Financial markets seem to have so far ignored the shutdown event risk.

\n

- They have been focusing on hopes of a positive outcome from US-China trade negotiations and favourable policies of Federal Reserve.

\n

- This risk may, however, come to the fore in case the issue remains unresolved.

\n

\n\n

### **How will a prolonged shutdown impact?**

\n\n

\n

- Uncertainty in the US government, the US-China trade war, and concerns of an impending slowdown continue to pose risks for the US economy.

\n

- This shutdown has particularly increased the uncertainty of the state of the economy and the movement of interest rates.

\n

- If it continues for longer, it will likely hamper business confidence and government data releases such as Nonfarm payrolls, inflation.

\n

- It remains a challenge for the Fed to decide on interest rate hike without reliable data and definitive signs of continued recovery.

\n

- There are also increased concerns on growth despite the guidance for two Fed rate hikes in 2019 in their previous meeting.

\n

- Moreover, the total cost of the US-Mexico border is estimated at \$25 billion, which will be around \$200 per US household.

\n

- So, even if the current demand of \$6 billion is approved, this could only be a short-term resolution.

\n

- A prolonged standoff over the borrowing cap increases the risk of a ratings downgrade from Aaa/AA+.

\n

\n\n

## **Can an emergency be brought?**

\n\n

\n

- The Donald Trump administration is still firm on its demand for \$6 billion to build a wall on the US-Mexico border.

\n

- Given the ongoing tensions, the possibility of a national emergency cannot be ruled out.

\n

\n\n

\n

- President Trump requires two components to build the wall

\n

\n\n

- \n
1. the authorisation to start the construction
  2. the land to build the wall on
- \n

\n\n

- \n
- Currently, a significant portion of the land on which the wall is to be built is private property of citizens.
  - In case of an emergency, the President has the powers to unilaterally authorise construction without Congress's approval.
  - However, he cannot seize private property in an emergency without paying the market price for it.
  - The question then would be if Trump can reallocate funds from the defence budget or would it be disallowed by the courts.
- \n

\n\n

### **What are the other recent U.S. government shutdowns?**

\n\n

- \n
- **2017** - In 2017, the U.S. avoided a near shutdown.
  - Congress had not allocated funds for the FY 2017 budget, which covered October 1, 2016, to September 30, 2017.
  - The continuing resolution funded the government during the 2016 presidential election and transition.
  - The government thus avoided a shutdown on April 28, 2017, when the continuing resolution, passed on September 30, 2016, expired.
  - The Senate and House approved the spending bill on May 1, 2017. It appropriated \$1.1 trillion in spending.
  - Trump asked Congress to cut \$10 billion from all other departments. Included in that budget was \$1.6 billion for a border wall with Mexico.
  - In August, 2017, he promised his administration would shut down the

government if Congress did not include funding for the wall.

\n

- Democrats oppose the wall; they would prefer to use the funds to keep Obamacare subsidies and the other domestic spending programs.

\n

- **2013** - The government shutdown began on October 1, 2013.

\n

- The Republican-controlled House submitted a continuing resolution without administrative funds for Obamacare.

\n

- The Senate rejected the bill and sent one back that included Obamacare. The House ignored that bill.

\n

- It sent one back that delayed the mandate that everyone should buy health insurance and deleted the subsidies for Congress and their staffers.

\n

- The Senate ignored that bill and the government shut down.

\n

- Ironically, the shutdown did not stop the rollout of Obamacare.

\n

- **1995** - This was one of the longest shutdowns in the U.S.

\n

- The government shut down twice from November 13 to November 19, 1995, and December 5, 1995, to January 6, 1996.

\n

- This was driven by a budget issue over introducing a balanced budget amendment to the Constitution.

\n

- When no budget deal was reached, the government shut down.

\n

- By January 1996, conflicting sides negotiated an agreement that cut some spending and raised some taxes, balancing the budget over the next seven years.
