

Weaponization of Space

What is the issue?

 $n\n$

China is making serious advances in weopanising the outer space.

 $n\n$

What is the Weaponization of Space?

 $n\n$

\n

 The weaponization of space includes placing weapons in outer space as well as creating weapons that will travel from Earth to attack or destroy targets in space.

\n

- e.g The placing of satellites with the intention of attacking enemy satellites, using ground-based direct ascent missiles to attack space assets, jamming signals sent from enemy satellites, using lasers to incapacitate enemy satellites and satellite attacks on Earth targets.
- It is different from the militarization of space. The militarization of space assists armies on the conventional battlefield, whereas via the weaponization of space, outer space itself emerges as the battleground.
- Due to these, space is now sometimes referred to as the "fourth frontier of war."

\n

 Ballistic Missile Defense (BMD) Systems, which include long-range ICBMs, are used as an auxiliary system capable of destroying space-based assets.

 $n\n$

What are China's developments?

 $n\n$

۱n

 \bullet China has been making impressive developments in its ICBM program. $\mbox{\ensuremath{\backslash}} n$ • These ICBMs aimed at and can target U.S. Intelligence, Surveillance, and Reconnaissance (ISR) satellites.

\n

- In 2015 the U.S. Department of Defense's report claimed that along with its civilian space program, China continues to develop a variety of capabilities including "development of directed-energy weapons and satellite jammers."
- \bullet China justifies that the loss of critical sensor and communications capabilities could damage the U.S. military's ability to achieve victory or to achieve victory with minimal casualties. \n

 $n\$

What should be done?

 $n\n$

\n

• US also recommend to plan, research, develop and deploy weapons systems to protect US interests and infrastructure in space.

\n

• The effect of this approach will result in an arms race in outer space as other countries may move to protect their interests against possible attack from the US.

۱n

- The United Nations has adopted a number of resolutions calling for negotiations to prevent an arms race in outer space.
- The **U.N.** Outer **Space** Treaty provides the basic framework on international space law, saying that space should be reserved for peaceful uses.

\n

- India was one of the 18 members that formed an ad-hoc Committee on the Peaceful Uses of Outer Space at the United Nations.
- India firmly believes in peaceful uses of outer space and has thus denounced space weaponization.

\n

- It is one of the leading voices in creating the Outer Space Treaty.
- The proper way to solve the arms race in outer space is to develop multilaterally negotiated controls on weapons in space through a new space treaty.

\n

• Such a treaty should,\n

\n

- 1. Ban the testing, production, deployment or use of weapons in space \n
- 2. Ban the testing, production, deployment or use of earth-based weapons which operate into space
- 3. Require the notification of all planned space activities n
- 4. Establish monitoring and verification procedures
- 5. Include procedures for resolving conflicts regarding military use of space and enforcement mechanisms for violations of the treaty.

\n \n

- The view of earth itself from outer space presents a perspective of our planet as a unified, interconnected and unique centre of life should not be fought over or destroyed by the folly of war.
- Thus, space in the 21st Century offers an opportunity to move towards a world of common security and disarmament rather than one of conflict and more arms races.
