

## **WEF Future Jobs Report**

### **Why in news?**

\n\n

World Economic Forum has released the Future of Jobs Report, 2018.

\n\n

### **What does the report implies?**

\n\n

\n

- According to the report 75 million jobs will be displaced by disruptive technology.

\n

- 133 million new jobs will emerge concurrently means that huge opportunities are up for grabs, but only for those prepared.

\n

- Sixty-nine per cent of Indian business leaders adopting intelligent technologies will be a critical differentiator.

\n

- While 84 per cent expect that AI-driven man-machine interface will add substantial value and improve efficiency.

\n

- Fifty-nine per cent worry about talent insufficiency being a major hindrance, and yet, only 29 per cent have earmarked investments for training.

\n

\n\n

### **What are the challenges faced by Indian Industries?**

\n\n

\n

- According to the official sources only 20 per cent of Indian business leaders believe their workforce to be AI-ready.

\n

- Indian companies has lack of engineers with new-age digital skills to address contemporary challenges, apart from the employees only few industries understand the emerging technologies.

\n

- As the contagion catches on, the supply mismatch will have to be addressed to remain competitive.

\n

- Many Indian companies are often unclear about the specific kind of training that's required, periodicity or even the source of the content.

\n

- While a few Indian IT companies are progressing remarkably towards meeting the amplified needs in a very short time, they lag in a multi-pronged approach through a coalition of competitors.

\n

\n\n

### **What measures needs to be taken?**

\n\n

\n

- Given the magnitude of demographic dividend India need take measures in which government and academia join hands with the industry and discard the prevailing silos.

\n

- The fear of job losses will have to be de-fanged by new jobs creation and preparing the workforce appropriately.

\n

- Indian Industries need to re-skill 1.5-2 million people in the next three to four years which will require substantial investment.

\n

- Thus the fear-mongering narrative of job losses needs cleansing and to be replaced by a more realistic one of enhanced productivity, where robots and humans complement one another.
