

Wildlife Tourism For Conservation

What is the issue?

\n\n

\n

- Wildlife tourism has been slowly gaining ground in India as an effective tool for conservation.
- It has also increased government revenue and aided local communities earn a livelihood.

\n

\n\n

How has wildlife tourism helped local communities?

\n\n

\n

- Wildlife tourism is currently focused on a few protected areas and these areas are running at maximum capacity.
- Local populations being the largest beneficiary, wildlife tourism can potentially bring development to remotest areas.
- 75crore or 45% of the 166crore generated through wildlife tourism was found to go back to communities.
- Additionally, better road connectivity and other physical infrastructures such as electricity, health, education etc... sprout with development of tourism.
- Notably, villages focused on tourism had better income, health and education levels than the rest.

\n

\n\n

How has it benefited conservation efforts?

\n\n

\n

- The dependency of the locals on the forests was found to be significantly reduce with tourism due to other sources of revenue.
\n
- Furthermore, their attitude towards wildlife conservation improved which is a win-win for conservation efforts.
\n
- In the Tiger Reserves that were surveyed, the total revenue generated from entry fees alone was over Rs 19 crore annually.
\n
- This was almost on par with the individual contributions of the state and central governments.
\n

\n\n

What is the best way forward?

\n\n

- Exclusionary models of conservation is not feasible over a larger landscape outside the small isolated pockets.
\n
- To take tiger conservation beyond the protected areas, we need to look at new, parallel and complementary models for conservation.
\n
- Seeing 'nature tourism' as an effective solution rather than a threat makes prudent sense in this regard.
\n
- Improving 'program planning and waste disposal' at tourism sites could potentially enhance benefits.
\n
- While ecological damage due to tourism aided real-estate ventures is indeed a risk, strict vigil could keep it in check.
\n
- Notably, the footprint of eco-tourism is much lighter than other developmental initiatives.
