3) "Blue Carbon", sometimes seen in news is, related to:

- a. Blue carbon is the term for carbon captured by the world's ocean and coastal ecosystems
- b. Rate at which carbon is sequestered into soil and plant material
- c. Utilization of innovative technologies to remove and store Carbon from atmosphere
- d. It is a complex mixture of compounds, consisting of decomposing plant and animal tissue, microbes.

Answer : a

### **Blue Carbon**

- **Blue Carbon:** - It pertains to the carbon sinks found in coastal, aquatic, and marine environments, which are sustained by vegetation, marine life, and sediments.
- Coastal ecosystems such as mangroves, tidal marshes, and seagrass meadows serve as substantial reservoirs of carbon, accumulated through vegetation and various natural processes over long periods.
- These ecosystems are capable of sequestering and storing carbon—commonly known as 'blue carbon'—at a rate that often surpasses that of terrestrial forests when measured per unit area.
