1. Discuss the merits of remote patient monitoring system in the context of Indian Health care systems:-

The newly hit health disaster, larger rural populations, micro family life styles, difficulties in monitoring non communicable disease and chronic diseases made us seek for alternative reliable health care system.

Remote patient monitoring has following merits to fullfill these needs :-

Helps in improving chronic condition management :-

It helps earlier detection of patients preventing delay in initial treatments. So patients could be saved in their Golden hour in emergency situation.

It aids smart deployment of available clinical resources

It helps creating reliable bank for the patient generated -data.

It reduce the exposures of health care workers on patients infections

Cost efficient and alerting System :-

It helps periodic check on patients vitals and blood sys sugar, pressure, Cardiac counts possible.
