

The problem of antimicrobial resistance is life threatening. Post covid 19 recovery it is not only the socio-economic crisis needs to be noticed the AMR consequence should be given focus.

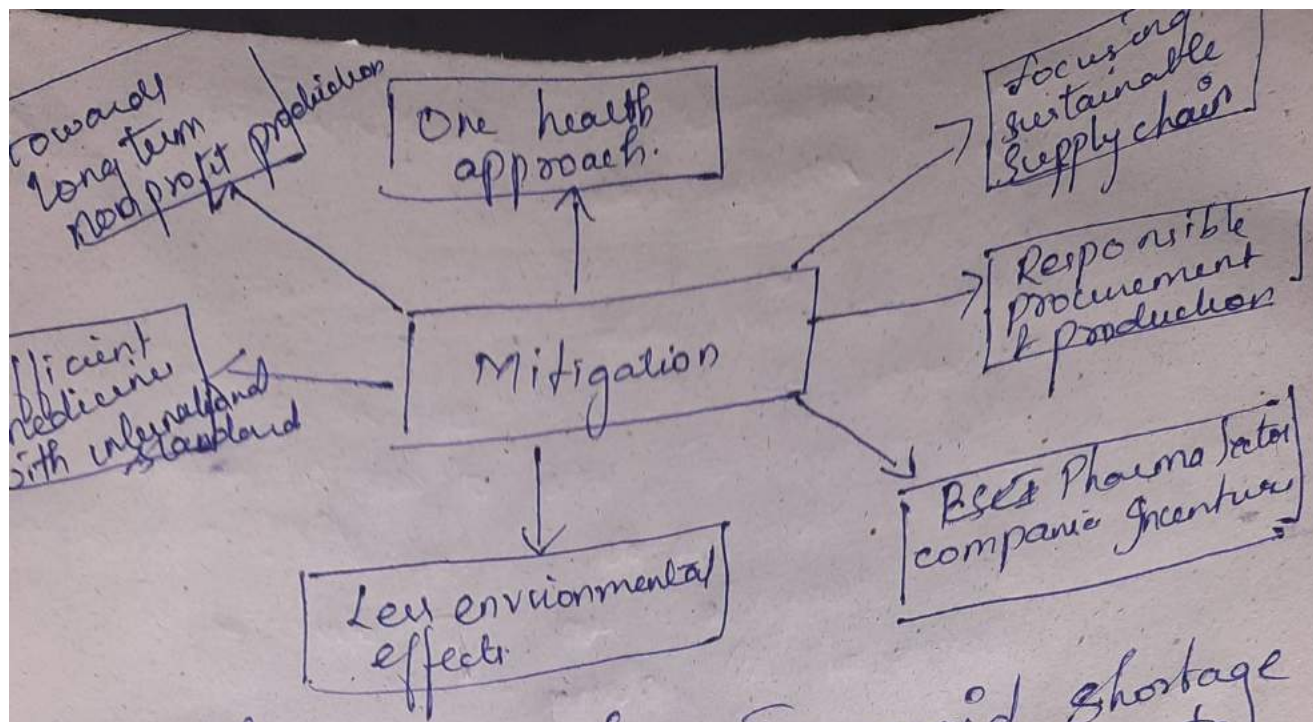

Why AMR is DETERIMENTAL?

According to WHO, 10 million death every year can occur by 2050.

This Covid-19 have brought ~~the~~ usage of more antimicrobial drug leading to increased AMR.

MITIGATIONS SHOULD BE ON TOP  
AGENDA:-

1) One health approach:- To avoid shortage & crisis in supply chain due to factor disruption factor like pandemic & geopolitical crisis, one health approach by complementary strategical multi sectoral health connection is necessary in health sector includes inclusion of government & multi level agencies.

2) Pharma Sector Company Incentive:- Government has brought scheme to incentivise the pharma sector (PSCI) to in production of drugs around 10 billion is being used as incentive as API account world's largest & is

3) Responsible Procurement + Production:- Effective incentives scheme can be resilient to small scale manufacturers. Responsible procurement & production

ensures long term sustainable effort  
in supply side.

① Less environmental impacts:- With absence of law restricting the dumping of ~~the~~ drugs in water-bodies & lands, The API's should be sensible in producing & disposal of drugs.

② MEETING INTERNATIONAL STANDARDS:- We pioneer in the pharma sector. ~~accounting~~ 3 largest producer should aim in producing drugs meeting international standard ~~do to~~ to ~~be~~ with the ~~and~~ global competitor.

③ Long term goals :- If Sustainable long term, 'No-Profit' goals should be the aim to reinforce the capabilities & strengthening of sector.

Conclusion:- Responsible procurement & production along with limitation of environmental effects & focussing towards sustainable long term goals should be the top goals to implement successful ~~merger~~ agenda.
