

1. The volatility of cryptocurrencies makes them remain.

Only as speculative Assets & not a medium of exchange.

Analyze:

Cryptocurrencies:

Cryptocurrencies are private fiat currencies which may

be mined by different mining and data analytic

technologies which is useful for storage of digital Asset in.

the form of data. Though the inherent of cryptocurrency is not

quite familiar with the world. Their level of legitimacy

in means of transactions, storage of Assets and its usage has

quite a lot of speculation, even by major investors of shares of.

even private investors and entrepreneurs like Tesla who has

been admired by its level of improvement.

But there are certain aspects which are not really

analytical or calculative of cryptocurrency which leaves it

to a question of volatility of its value.

(i) Issues like the economic level of impact of its mining.

with correlation with demand and supply gap.

(ii) Basis of usage of cryptocurrency on means of any product being sold in international markets and.

Legitimacy of Acceptance by the Government

(ii) Above All not many people understand the difference.

between how a share value is aggregated when compared to the value of aggregate rise and fall of value of

cryptocurrency which raises the big issues of its

volatility.

Government concern:

Government often sources its revenue by means of taxes over its controllable public fiat

currency while as on the other hand, cryptocurrency is

a private fiat currency which leads government to the additional tests of vigilance and regulations.

People's concern or Public concern: Public in spite of its

passionate towards investment in cryptocurrency has often ended up in dilemma of investment due to its floating value or

the currency notional purpose of cryptocurrency which

has not always entered successfully in commercial markets

thus making it Assets value only as a speculative Asset

and not of monetary benefit.
