

1. India definitely has the potential to feed the world and become one of the top food exporters by 2030. Explain.

Indian agriculture sector is largest which employs 152 million Indians with 4.1 year on-year growth, and stand second position in world agricultural-food exports sector with \$ 367 million share.

EFFECTIVE ACTIONS TO IMPROVE FOOD EXPORTS

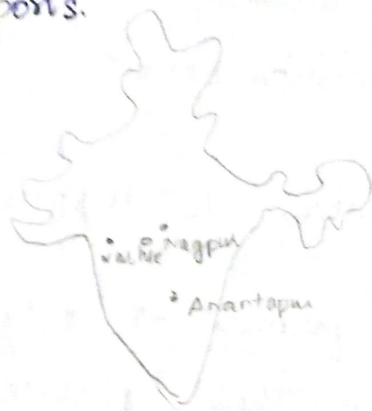

1. Empowering farmers → only few farmers are exporting their produce. So farmers need to be aware of export & connecting with GVC's (Global value chains)
2. Improving quality → In exports transparency in quality of food will increase demand of products
3. Technological food storage system → Most farmers struggle to access to cold storage chains and logistical infrastructure.

4. Initiatives to increase farmer's accessibility:

Helping farmers to expand their production and making them accessible to developed market

5. Branding - like Nashik grapes, Nagpur orange, Anantpur Banana, government can brand famous food products and improve farmers exports.

6.

6. Introducing Indian Niche - Exporting

Indian variants of millets, rice, oilseeds and fruits like Alphonso mango, Indian gooseberry will help to increasing Indian variant food

7. Connecting GVC's and imposters - by this imposters from other markets are accessible to indian produce and buy product.

* APEPA - Government organisation helps as agri tech platform and

Increasing transparency in pricing, quality compliance, Branding and with efficient accessibility India can become top exporter in the world.
