

The density of health workforce in India needs to be improved to increase the efficiency of delivery of health care services at various level. Analyse

Acc to World Health Report approx. 4 ~~4.4~~ health workers to be available for 10,000 people.

* Density of health workforce

→ Approx. 22.8 ~~or~~ even less work/health workforce available for 10,000 people

→ Approx. 11.6 lakh doctors and 23.4 lakh nurses as of 2018 are available. for human population.

↳ More than 30% of doctor and 50% of nurses ~~are~~ not have adequate of part of the health system.

→ The no. of nurses are very low, approx 4.3 ~~nurses~~ per doctor, an average is present

↳ the req. is 3 ~~nurses~~ per doctor

Infra structure;

→ Lack of proper health and infra structures

• The total of 157 Medical colleges are present against lacks of

engineering and arts colleges

* Measure of need of Improvement

→ Infrastructure:

↳ need to put heavy investment in infrastructure and equipments

↳ need to establish many medical colleges and institutions to with full of workforce (or) Capacity to increase doctor capacity

↳ need to have more nursing houses and colleges to increase the no. of available nurses

→ Manpower (or) Human Resource

↳ need to increase the no. of doctors available

↳ the ASHA workers and similar SHG's are need to involve in health force.

↳ the need to train for basic eminities and

↳ the workforce need to be spread equally and in every part of India to improve health status.

1. ~~Condo~~ need to
⇒ Why ^{need to} worry?

→ It Expected that after using
100% of graduates the market
or demand will not be
helpful for growing or present
population.

→ It will reach till 24.1m
2030.

* Conclusion

→ Human Health is more important
~~than~~ any other workforce and
need to in is to improve the
health facility, in order to
Keep the engine or heart of
economy fully functional.
